

# NBCCEDP Strategies to Increase Breast and Cervical Cancer Screening

A comprehensive program integrates cross-cutting strategies with each primary strategy

## Primary

- Provide direct clinical service delivery
- Implement evidence-based interventions in health systems

- Connect women in the community to screening services

- Inform policies that increase access to cancer screening

## Management

- Monitor spending and operations
- Meet CDC reporting requirements

## Cross-cutting

- Use state and local data to inform program planning and monitoring

- Collaborate with programs that can help achieve cancer control goals

- Partner with organizations to reach your priority women

- Assess activities, processes, and progress towards goals

Decreasing cancer burden through prevention, early detection, and timely follow-up
