2021 GEAR Group:
Supporting Communities in Building Resilience During Times of Crisis

Resources and References Document

About NACDD GEAR Groups
GEAR Groups explore their topic through case presentations, short didactic presentations, and active discussions throughout four 90-minute video conferences. A facilitator and strategist guide each discussion to explore opportunities for improvement through partnerships, promising interventions or policies, data, and evaluation. The 2021 GEAR Groups focused equity as a foundation and community voice at the center.

About: Supporting Communities in Building Resilience during Times of Crisis
Whether it’s a novel disease outbreak, a hurricane, or other crisis, health departments are increasingly tested by events that force a short or long-term shift to emergency operations and crisis management and often vary in their impact on residents by race, gender, income level, or housing status. Individuals with existing chronic conditions are more vulnerable to adverse outcomes, complications, and increased mortality from novel health threats or disasters. This GEAR Group will explore strategies that leaders can use to cultivate community resilience with a focus on upstream factors that impact health. Using chronic disease programming (e.g. diabetes prevention or hypertension self-management) as a foundation, case presentations or proposals explored effective or promising practices that enable state health departments to support communities to handle crises effectively and equitably, emerge resilient, and smoothly enter the next normal. Meetings were held in 2021 on Mar. 2, 9, 16, 23.

Participating states
• Arizona
• District of Columbia (DC)
• Delaware
• Kansas
• Maryland
• Minnesota
• Nevada
• South Carolina
• South Dakota
