

# Tennessee Breast and Cervical Screening Program

**Fiscal Year 2021 (July 1, 2020 - June 30, 2021)**

Data As of July 2021

The Tennessee Breast and Cervical Screening Program (TBCSP) operates in all 95 counties by providing screening and diagnostic procedures for breast or cervical cancer and enrollment into TennCare for treatment for eligible individuals. The TBCSP aims to serve the most vulnerable populations, specifically those who are low-income and uninsured or underinsured.

## Program Eligibility Guidelines:

Nearly 400 vendors, including local health departments, radiologists, breast centers, and Federally Qualified Health Centers, provide services throughout Tennessee.

## 11,617 women served

Among more than 86,000 eligible women in Tennessee, almost 8% received cancer screening through TBCSP

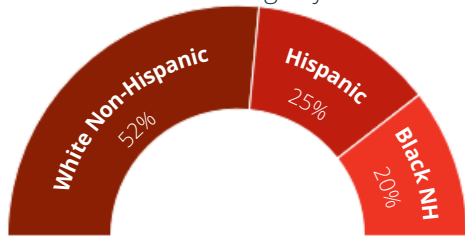

Over 10,300 breast services provided

154 breast cancers diagnosed

Routine Breast Screenings by Race/Ethnicity

Increase in Number of Women Screened Compared to FY20

**9% Increase** in Hispanic Women  
**21% Increase** in Black Women

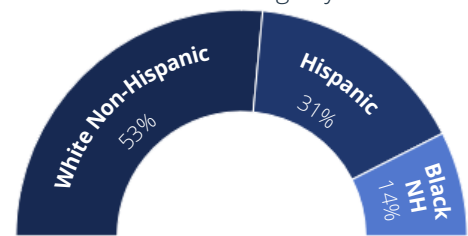

Over 4,100 cervical services provided

191 cervical pre-cancers and cancers diagnosed

Routine Cervical Screenings by Race/Ethnicity

Increase in Number of Women Screened Compared to FY20

**6% Increase** in Hispanic Women  
**5% Increase** in Black Women

43 men received breast services through TBCSP in FY2021.

Men are eligible for diagnostic breast services if they meet the other program eligibility requirements and can be enrolled in TennCare if breast cancer is diagnosed.
