Purpose of this Manual

This manual is designed to give the provider organization the information, guidelines and resources needed to implement the WISEWOMAN program. Program staff are available to assist you by e-mail, phone and on-site visits.

The programs and website links are identified as a public service to direct the reader to clinical resources, national guidelines and protocols, and relevant programmatic behavior change support information. The resources in this guide were current as of the publication date but are always subject to change.

Materials Development Overview and Guidance

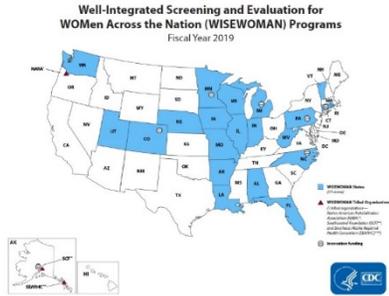

The Centers for Disease Control and Prevention (CDC) retains an unrestricted right to use, reproduce, adapt, and disseminate products developed using WISEWOMAN federal funds. These products may include program participant materials, graphic designs, educational and other informational materials, fact sheets, newsletter templates, etc. If a provider organization is working with subcontractors or consultants to develop program materials, they should ensure that the subcontractor/consultant is aware that any materials that they produce with WISEWOMAN funds will be the property of the CDC. The funding source should be noted on any material or publication developed using WISEWOMAN funds. An appropriate citation would be:

The creation of this [insert material name or description] was made possible by cooperative agreement DP18-1816 from the Centers for Disease Control and Prevention/Division for Heart Disease and Stroke Prevention/ WISEWOMAN Program. Its contents are solely the responsibility of the authors and do not necessarily represent the official views of CDC.

To increase name recognition and awareness of the WISEWOMAN Program, provider organizations are to use the name **WISEWOMAN** (all capital letters, as it is an acronym) on written materials.

Section 1: Program Overview

Introduction and Background

The **Well-Integrated Screening and Evaluation for WOMen Across the Nation (WISEWOMAN)** program was a result of the 1993 legislation that expanded the services offered within the National Breast and Cervical Cancer Early Detection Program (NBCCEDP). In Wisconsin, NBCCEDP is called the Well Woman Program. The WISEWOMAN program helps women understand and reduce their risk for heart disease and stroke and promotes lasting heart-healthy lifestyles. Wisconsin has had a WISEWOMAN Program since 2008. The current cooperative agreement (DP18-1816) extends from September 30, 2018 through September 29, 2023.

The NBCCEDP (called Well Woman in Wisconsin) and WISEWOMAN Program are "sister" programs offering two distinct health services. The table below gives a comparison of each program's health services.

TOPIC	NBCCEDP	WISEWOMAN
Year Funded	1990	1995
# of Funded Programs	50 states, District of Columbia, 5 territories and 12 tribal organizations	21 states and 3 tribal organizations
Program Administration	CDC's Division of Cancer Prevention and Control Program, Services Branch, National Center for Chronic Disease Prevention and Health Promotion	CDC's Division of Heart Disease and Stroke Prevention, Program Development and Services Branch
Program Focus	Early detection of breast and cervical cancer; population-based approaches to improve systems that increase high quality breast and cervical cancer screening and management consistent with current guidelines	Public health practice approach that focuses on delivery of evidence-based strategies to reduce risks, complications, and barriers to the prevention and control of heart disease and stroke
Services Provided	<ul style="list-style-type: none"> • Cancer screening: <ul style="list-style-type: none"> ◦ Breast exam and mammography ◦ Pap test ◦ HPV testing • Diagnostic tests to pinpoint problems • Referrals to health care providers for medical management of conditions for women with abnormal or suspicious test results • Funds cannot be used for treatment 	<ul style="list-style-type: none"> • CVD risk factor screening including: <ul style="list-style-type: none"> ◦ Blood pressure, blood lipids ◦ Blood glucose or A1c (if known to have diabetes), optional A1c to screen high-risk clients ◦ Height/weight, BMI, waist circumference ◦ Depression screening • CVD history, healthy lifestyle habits and readiness to change status assessments • Bi-directional referrals • Hypertension management, evidence-based healthy behavior support services • Funds cannot be used for treatment

TOPIC	NBCCEDP	WISEWOMAN
Where Clinical Services Are Provided	<ul style="list-style-type: none"> • Health care providers are recruited to offer regular pelvic, pap, and clinical breast exam screening tests and procedures • Providers must be willing to coordinate the care of women enrolled in the program from screening and clinical follow-up to a final diagnosis • Mammography facilities and clinical laboratories are recruited to provide services 	<ul style="list-style-type: none"> • Health care providers are recruited from those offering NBCCEDP screening services • Health care facilities that employ clinical systems of care with demonstrated success in hypertension management, such as through use of electronic health records, medication therapy management, clinic staff training, team-based care, and quality assurance processes • Providers with staff skilled in providing patient-centered risk counseling and chronic disease management support

Burden of Cardiovascular Disease (CVD) in Wisconsin¹

Heart disease, stroke and diabetes remain among the leading causes of death and disability among women of all racial and ethnic groups in Wisconsin. State data show African Americans, Hispanic/Latinos and Native Americans are unequally burdened with the health effects of higher prevalence, morbidity, and mortality of CVD compared to White women.

Hypertension – Hiding in Plain Sight

It is estimated that there are 1.3 million Wisconsin adults with hypertension but less than half have it under control. Of those who are uncontrolled:

- ♥ 44% are aware and treated but are still not controlled
- ♥ 40% are unaware that they even have hypertension

Diabetes/Pre-Diabetes

Two out of five adults are expected to develop type 2 diabetes in their lifetime. Nine percent of Wisconsin adults have been diagnosed with diabetes. One out of four adults with diabetes do not know they have it. Approximately one in three adults have prediabetes, but only about 10% have been diagnosed.

Obesity/Physical Inactivity, Diet

Wisconsin obesity rates are consistent with the national average which indicates that 64% of adults are either overweight or obese.

In Wisconsin, little more than 5 out of 10 adults are meeting the physical activity recommendation of at least 150 minutes of moderate activity per week.

Only 1 out of 6 adults meet the recommended consumption of five or more fruits and vegetables a day.

¹ <https://www.dhs.wisconsin.gov/disease/chronic-disease.htm>

Cigarette Smoking

While the use of tobacco is continuing to decrease, 17% of adults currently smoke. Smoking rates vary among racial and ethnic groups with Native Americans having the highest rate at 37% and Hispanic/Latinos recording the lowest at 12%.

Nationwide WISEWOMAN

The WISEWOMAN program served nearly 150,000 women nationwide, between 2008 and 2013, 91% of whom had at least one risk factor for heart disease and stroke. Nearly 101,000 women participated in a healthy lifestyle service to reduce their risk for heart disease and stroke.²

WISEWOMAN (Purpose, Goals, Framework)

Individuals with heart disease and diabetes are at risk for serious complications, many of which can be prevented or delayed by early detection, medical control, self-management, and evidence-based healthy support services.

The purpose of the WISEWOMAN program is to extend preventive health services to women who are participants in the Well Woman program. These extended preventive health services include assessment of cardiovascular risk factors and provision of services to reduce those risks through improved diet, physical activity, tobacco cessation, blood pressure monitoring and medication adherence support.

Goals

The goals of the WISEWOMAN program are to:

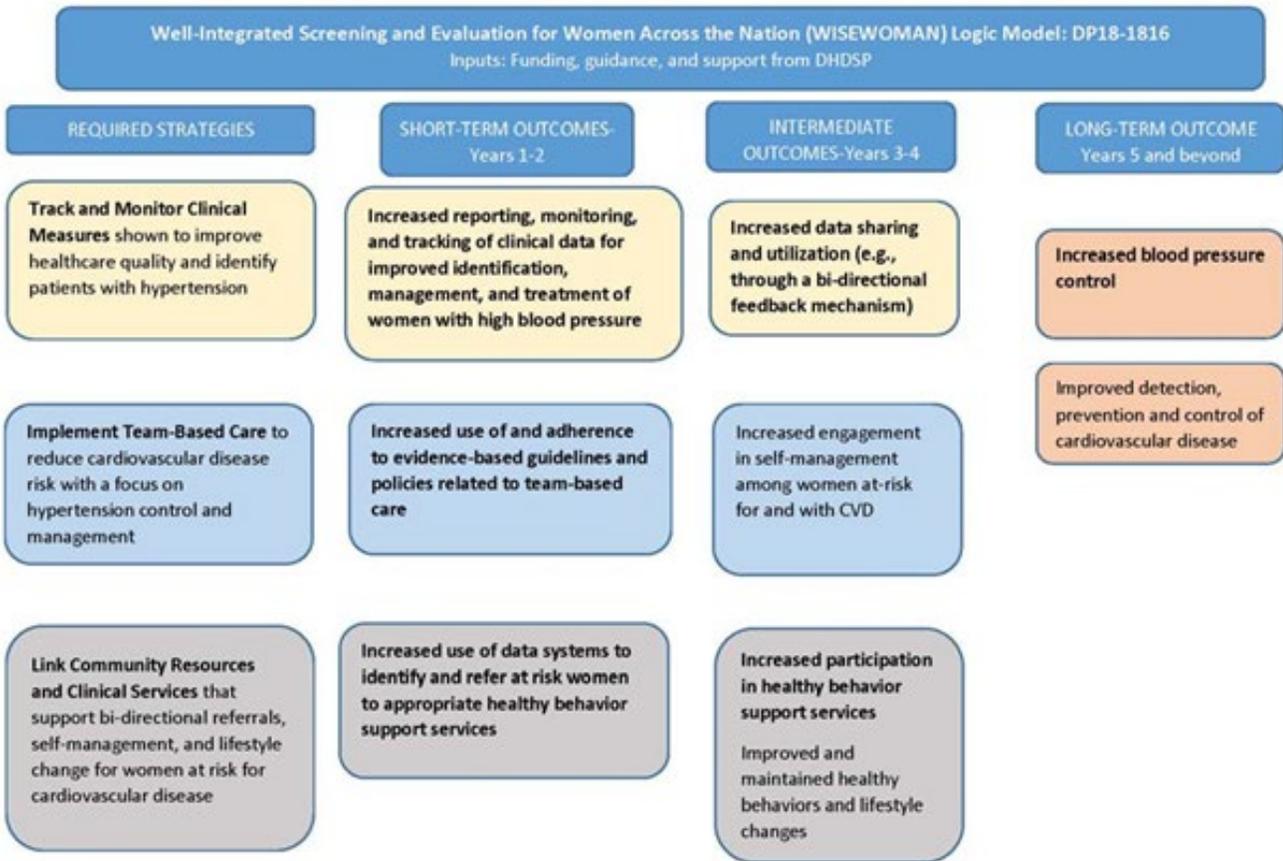

- Reduce cardiovascular risk factors among high-risk women.
- Assure that cardiovascular screening is provided to women ages 35-64 who are participants in the Well Woman Program.
- Work with community-based organizations to provide evidence-based prevention services to those women in need of them through bi-directional referral and linkages.
- Improve the management and control of hypertension by integrating innovative health system-based approaches, such as team-based care, blood pressure self-monitoring (BPSM), pharmacy medication management programs, and strengthening community-clinical linkages.
- Gather and report program-related evaluation data, including impact measures.

Framework

The WISEWOMAN Program framework is based on the CDC's National Chronic Disease Prevention and Health Promotion Center's four domains; 1. Health Systems, 2. Community Clinical Linkages, 3. Epidemiology and Surveillance, and 4. Environmental Approaches. The WISEWOMAN Program activities are focused primarily in the health systems and community clinical linkage domains. The Epidemiology and Surveillance and Environmental activities are intended to support all the program components.

² <https://www.cdc.gov/wisewoman/about.htm>

WISEWOMAN Strategies and Activities Logic Model

Glossary of Key Terms for WISEWOMAN

Bi-directional Referral Process

Includes both the referral information going from the WISEWOMAN provider organization to the evidence-based healthy behavior support service and the information flowing back to the provider organization on patient participation and outcomes, e.g., weight loss, blood pressure change.

Blood Pressure Control

Having a Systolic Blood Pressure (SBP) below 130 mm Hg and a Diastolic Blood Pressure (DBP) below 80 mmHg for most people with hypertension. If multiple readings were taken in one visit, the average of all readings are used to obtain the final blood pressure value. With our adoption of the 2017 ACC guidelines, we are not focusing on the term “Uncontrolled HTN,” rather we are looking more at thresholds and goals. Please see the table on page 15 in the guidelines.

Community-Clinical Referral System

Includes any electronic, telephonic, fax-based, web-based, or paper-based system that tracks and receives data for all women who have been referred to a healthy behavior support service.

Healthy Behavior Support Service (HBSS)

Evidence-based interventions, e.g., Lifestyle Programs (LSP), Health Coaching (HC) and community resources.

High Blood Pressure (HBP)

Have a SBP of 130 mm Hg or higher or DBP of 80 mm Hg or higher. See ACC/AHA Task Force 2017 Guideline for Prevention, Detection, Evaluation and Management of High Blood Pressure in Adults.

Integrated Office Visit (IOV)

An IOV is defined as providing WISEWOMAN and Well Woman screening services during the same office visit.

Known high blood pressure

Clients with multiple abnormal blood pressure values, e.g., SBP \geq 130 mm Hg or DBP \geq 80 mm Hg, recorded in the medical record with report of a provider diagnosis code for hypertension according to ICD 10-codes.

Multi-disciplinary team approach (also referred to as team-based care)

Each team includes the client, the client's primary care provider, and other non-physician professionals such as nurses, pharmacists, dietitians, social workers, health coaches, patient navigators, and/or community health workers. Team members provide process support such as team huddles and share responsibilities of care to complement the activities of the primary care provider. These responsibilities include medication management, patient follow-up and adherence, and self-management support (Preventive Services, 2012).

Policies or Systems

These includes laws, regulations, procedures, protocols, quality improvement processes, structures, arrangement, administrative actions, incentives, or voluntary practices of governments and other institutions to encourage a multi-disciplinary team approach to blood pressure control. These may be set by the provider, payer, Accountable Care Organizations, Medicaid, or Medicare.

Undiagnosed Hypertension

Patients with multiple abnormal values, e.g., systolic blood pressure equal to or greater than 130 mmHg, or diastolic blood pressure equal to or greater than 80 mmHg recorded in the medical record without report of a provider diagnosis code ICD-10.

Validation of the Client's Diagnosis

CDC requires that the client's diagnosis of hypertension be evident by an ICD code(s) recorded in the client's medical record. The program cannot accept a client's self-reporting alone, even if she is on medication. In addition to hypertension validation, Wisconsin requires confirmation by ICD code(s) for diabetes, or high cholesterol, in addition to the client self-reporting. This could be either a previously established diagnosis or a new diagnosis based on their current screening results.

Section 2: Eligibility and Recruitment

Client Eligibility Criteria

To be eligible for the WISEWOMAN Program the woman must:

- Be enrolled in the Well Woman Program.
- Live in Wisconsin.
- Be age 35-64 years.
- Be under-insured or un-insured.
- Have income at or less than 250 percent of the federal poverty level and meet all [Well Woman Program Income Eligibility Guidelines](#).
- Sign a [WISEWOMAN Client Consent form](#).

Client Enrollment

The provider organization should develop plans to recruit clients from women who are new to the Well Woman Program and women who are scheduled for their Well Woman breast and cervical cancer screening office visit. The provider organization will initiate the enrollment form for the [Well Woman Program](#).

Enrollment and participation in the WISEWOMAN Program is voluntary. Provider organizations should remember the core objective of WISEWOMAN is to help those clients who are in the contemplation stage of readiness to become informed and activated participants for cardiovascular disease risk reduction and self-management. WISEWOMAN is not just a screening program. The aim of WISEWOMAN should be clearly promoted before enrollment. If an eligible client indicates that she is not ready to engage in healthy behavior change (pre-contemplation stage) or that she might be interested in the future (contemplation stage) the provider should contact her in the future and not enroll the client into the WISEWOMAN Program.

Enrollment Requirements

For a client to be enrolled in the WISEWOMAN Program she must:

1. Be enrolled in the Well Woman Program.
2. Be willing to make changes in her lifestyle that support the prevention, delay or control of cardiovascular, diabetes, and other chronic diseases.
3. Complete the [WISEWOMAN Program Client Consent form](#).
4. Participate in an Integrated Office Visit (IOV) whenever possible with the Well Woman Program screening visit.
5. Complete all WISEWOMAN program assessments, including the Health History and the Healthy Lifestyle Assessment.
6. Be willing to be tested for cholesterol and blood glucose levels. The client must come to her appointment fasting for at least nine hours prior to the blood draw. If she has not fasted, her appointment must be rescheduled.
7. Have blood pressure, height, weight and waist measurements.

Client Recruitment Process

Reaching eligible and motivated women to take part in WISEWOMAN is critical to the success of the program. Women who are enrolled or eligible to be enrolled in Well Woman services can have additional preventative services through WISEWOMAN. Clients who enroll in WISEWOMAN **should be ready to make lifestyle behavior changes, no matter how small, to improve, prevent, delay, or control cardiovascular, diabetes, and other chronic diseases**. Remember, clients making small changes in eating and physical activity can improve their health and start down the path to living a healthy lifestyle for life. Recruitment strategies may include:

Health System

1. Review Electronic Medical Records to identify new clients.
2. Promote the WISEWOMAN program services when sending Well Woman annual rescreen reminder letter or postcard.
3. Place promotional and/or engaging tools and materials in waiting rooms.

Community

1. Participate in community events including health fairs, community forums and community organization meetings to promote Well Woman and WISEWOMAN services.
2. Use WISEWOMAN clients as ambassadors to promote the program to other women.

Media

1. Utilize radio talk shows to promote women's wellness screenings.
2. Submit personal stories to community newspapers.
3. Ask a community partner (grocery store or laundromat) to post program flyers.
4. Use these key months to promote program services:
 - February: Heart Health Awareness
 - May: Mother's Day
 - October: Breast Cancer Awareness
 - November: Diabetes Awareness Month

Client Termination

The client must remain eligible with the Well Woman Program to maintain eligibility in the WISEWOMAN Program. If a client is terminated from the Well Woman Program for any reason, she is simultaneously terminated from the WISEWOMAN Program and is not eligible for any WISEWOMAN screening and Healthy Behavior Support Services. WISEWOMAN clients who are participating in an approved lifestyle program in which the reimbursement has been paid in full, e.g., Take Off Pounds Sensibly (TOPS), Diabetes Prevention Program (DPP), or the YMCA-Blood Pressure Self-Monitoring Program, can continue until the completion of the support service.

Section 3: Program Roles and Responsibilities

Wisconsin Department of Health Services

Program Management and Implementation

1. Develop and execute program contracts.
2. Establish partnerships that support WISEWOMAN cardiovascular disease management and healthy behavior support services.
3. Monitor expenditure reports and authorize reimbursement based on accurate provider reports.
4. Develop guidelines and reporting requirements based on national CDC guidelines.
5. Maintain ongoing communications with provider organizations regarding annual work-plans, program policies, procedures, screening and diagnostic data, community scans and other issues as they arise.
6. Gather and document provider organization standardized protocols to:
 - a. Provide team-based care.
 - b. Identify hypertensive clients.
 - c. Provide hypertension management
 - d. Provide clinical and community bi-directional referrals.
7. Provide WISEWOMAN Program materials (forms, publications).
8. Support provider assessment, planning, training, implementation, and sustainability of care teams to support CVD improvements.
9. Provide training, technical assistance, and professional education resources.
10. Set, monitor and maintain quality assurance standards.
11. Maintain client confidentiality.
12. Maintain the WISEWOMAN Med-IT® data management system for program evaluation and reporting Minimum Data Elements (MDE) to CDC.
13. Provide education tools, literature and other educational materials as needed.
14. Support state and CDC-led program evaluation.

Provider Organization Team

All staff involved in implementing program services are considered a member of the team. Each team will depend on the provider organization and may include data entry, billing personnel, clinical intake staff, clinical screening staff (taking biometrics and clinical values, medical providers performing risk counseling and clinical follow-up (alert, abnormal, HTN management), and healthy behavior support services staff.

Training/Orientation/Continuing Education

1. Participate in WISEWOMAN Program orientation: training sessions, chronic disease management, e.g., blood pressure, diabetes, high cholesterol programs and other professional education opportunities as needed.
2. Maintain skills in conducting appropriate screening services such as use and maintenance of point-of-care testing and lab equipment, accurate blood pressure, waist measurement, biometric testing procedures, PHQ2 depression screening, and client-centered risk counseling using Motivational Interviewing (MI) techniques.
3. Meet licensing and certification requirements.
4. Document annually, training and/or CE activities that support WISEWOMAN program using the [WISEWOMAN Provider Assurance and Training Checklist](#) form.

Program Services

1. Perform medical evaluation (baseline, follow-up, and rescreening services) based on the National Clinical Care guidelines pertaining to blood pressure, cholesterol and diabetes, and lifestyle recommendations for obesity, diet, physical activity, and tobacco cessation. See the [National Clinical Care Guidelines](#) publication.

Utilize the client's screening information in subsequent years for comparison and to appropriately confer with the client.

2. Utilize client-centered risk counseling for all clients screened. This includes:
 - a. Providing screening results both verbally and in writing.
 - b. Explaining each client's health risk based on screening results,
 - c. Providing bi-directional referrals to support medical follow-up, healthy behavior support services, and community resources to help reduce their risk of heart disease, stroke, and diabetes.

Alert and/or Abnormal Values Clinical Follow-up Services

1. Provide timely and appropriate medical follow-up (unless the client refuses) including fasting lab tests and/or diagnostic office visits as indicated by the assessment and screenings.
 - a. Conduct Diagnostic Office Visits (DOV) for clients who have alert values immediately or within **seven calendar days**.
 - b. Conduct optional DOVs for clients who have abnormal values **within six weeks**.
 - c. Refer clients with abnormal blood pressure to a hypertension management program and track their involvement.

Community—Clinical Linkages

Provide community and clinical bi-directional referrals for self-management and lifestyle change for clients at risk for cardiovascular disease, e.g., low cost or free medications, chronic disease management programs, medical home provider, evidence-based healthy behavior support interventions (lifestyle programs, health coaching), food security, and physical activities.

Program Data and Reports

1. Document all WISEWOMAN services using the Wisconsin program data management system within three working days after the client is seen or as soon as possible after receiving information from the health care provider.
2. Participate in quality assurance reviews and monitoring by the staff office.
3. Support state and Centers for Disease Control and Prevention (CDC)-led program evaluation as needed.

Provider Organization Manager/Coordinator

Staff responsible for overseeing the implementation of the WISEWOMAN Program by acting as the point of contact between the provider organization and the program state office staff.

Program Implementation

1. Assist state office in obtaining baseline performance measure data.
2. Assure the provider organization meets or shows significant progress toward meeting performance measures established by CDC.
3. Assure WISEWOMAN Program protocols for service delivery, bi-directional referral, hypertension identification, management, and documentation are being followed.
4. Assure WISEWOMAN team staff have needed skills for effective program implementation.
5. Participate and support WISEWOMAN Program orientation and training sessions.
6. Assure that laboratory services used for screening meet Clinical Laboratory Improvement Amendments of 1998 (CLIA) or are CLIA-waived. Assure adherence to the manufacturer's guidelines in the use of laboratory technology.
7. Assure that providers are engaged in team-based care.
8. Assure providers are skilled in implementing appropriate screening services, such as use and maintenance of point-of-care testing and lab equipment, accurate blood pressure measurement, accurate biometric testing procedures, waist measurement, depression screening, and client-centered risk counseling using motivational interviewing techniques, etc.

9. Assure that all WISEWOMAN service data are entered into the data management system within 3 working days after the client is seen or as soon as possible after receiving information from the health care provider.
10. Document team members' training and orientation on WISEWOMAN program services, according to their role and responsibilities. Documentation must be recorded using the [Program Assurances and Training Checklist](#) form. Send copies to the state office staff annually.
11. Provide and regularly update staff contact information.

Client Recruitment

1. Recruit clients from the Well Woman Program for WISEWOMAN services.
2. Coordinate recruitment efforts to ensure that eligible women are enrolled in both programs.
3. Enroll clients for WISEWOMAN services using the [Well Woman](#) Enrollment form.
4. Support clients to return for baseline, follow-up screening, and annual rescreen visit(s).
 - a. Schedule women for annual screenings at 12–18-month intervals. Provider must have the client's previous screening information (health history and healthy lifestyle assessments, screening activity form, healthy behavior support form, etc.) available for comparison and appropriately confer with the client.
 - b. Schedule women for follow-up screening 4–6 weeks after completion of their healthy behavior support service.

Program Services

1. Assure client-centered risk counseling and health coaching are delivered in accordance with program protocols.
2. Assure clients are notified of whether recommended services are covered or not covered by the WISEWOMAN Program prior to receiving them, and clients are not billed for any service that is covered by the WISEWOMAN Program.

Alert and/or Abnormal Values Clinical Follow-Up Services

1. Assure clients receive timely and appropriate medical follow-up (unless the woman refuses), including fasting lab tests and/or diagnostic office visits as indicated by the assessment and screenings.
 - a. Assure that clients who have alert values have access to medical evaluation and treatment **immediately** or **within seven calendar days**.
 - b. Assure that clients who have abnormal values are referred for a DOV if deemed necessary by the provider **within six weeks**.
 - c. Assure documentation of three attempts to contact clients for follow-up of alert findings, DOV visits and/or selected healthy behavior support services before designating the client as "lost to follow-up."
2. Assure that clients with abnormal blood pressure are referred to a hypertension management program and track their involvement.
3. Assure case management services as needed.

Community - Clinical Linkages

1. Assure clients needing ongoing management are linked using bi-directional referral to free or low-cost ongoing medical treatment as indicated based on screening or DOV visit recommendations. Feedback should provide information on referral status and identified barriers to accessing those services.
2. Assist clients in gaining access to low-cost or free medications if they require medication therapy. Assure and document whether clients in need of medication resources were linked to these services.
3. Conduct annual community scan with assistance from the state office. The scan should identify existing resources in the community that support healthy lifestyle changes.
4. Utilize bi-directional referral to community resources to help clients achieve their lifestyle behavior change goals.

Program Data and Reports

1. Assure client confidentiality and protection of medical records as required by law.
2. Assure WISEWOMAN data are entered in the WISEWOMAN Med-IT® data system within three working days after the client is seen or as soon as possible after receiving information from the health care provider. The WISEWOMAN Med-IT® data system is not an Electronic Medical Records system (EMR) and should not be used to gather any information beyond the required data elements used for cardiovascular screening surveillance.
3. Conduct “real time” quality and error data entry checks.
4. Review validation reports sent by the data manager. These validation reports capture any data errors and quality issues that should be reviewed and corrected by the provider organization before the WISEWOMAN Minimum Data Elements (MDEs) are submitted to the CDC twice each fiscal year.
5. Conduct program management activities using client data reports: WW Abnormal Assessment, LSP/HC and Clients By Provider.

Section 4: Program Services

Types of Screenings

1. Baseline Screening: The initial client screening; establishes starting point for WISEWOMAN program.
2. Follow-Up Screening: Post healthy behavior support service (must occur within four to six weeks of completion of LSP/HC and not later than 11 months after the client's baseline screening or last rescreening).
3. Rescreening: Subsequent screening occurring 12–18 months after a client's baseline screening or last rescreening.

Program Delivery

WISEWOMAN baseline screening services begin a one-year cycle. The visit must occur as part of an IOV in conjunction with the Well Woman Program breast and cervical cancer early detection office visit. The rescreening visit should be an integrated office visit to the extent possible. WISEWOMAN funds may pay for limited additional office visits based on specific program criteria [see Section 7, Diagnostic and Hypertension Management Office Visits].

The provider organization must utilize bi-directional referrals to link clients who need additional diagnostic services, ongoing management, referral to low-cost or free medical care, medication assistance, or community-based resources as appropriate.

Referral to a Healthy Behavior Support Service (HBSS), health coaching, lifestyle programs, or other support services will be based on the readiness to change and risk factors. However, all clients must agree to receive at least one health coaching session. This session occurs at the IOV following risk counseling.

The WISEWOMAN CVD risk reduction efforts will focus on identifying undiagnosed hypertension, as well as hypertension control and management. This includes:

- Support for strategies such as team-based health care.
- Medication Therapy Management (MTM).
- Health systems changes (e.g., electronic health record tracking of clients with hypertension, blood pressure self-monitoring, medication management counseling, clinic staff training, and quality assurance processes).

The WISEWOMAN state office staff will work with the provider organization to document standard protocols for identification, management and treatment of hypertension.

The aim is to help the provider organization establish or strengthen practical methods to identify, track and improve control of hypertension. The protocol will vary depending on the capacity of the provider organization, but at a minimum should include:

- Team-based care with pharmacists, nutritionists, nurse educators, community health workers, or others.
- Use of electronic reporting and tracking of blood pressure trends.
- Self-measured blood pressure monitoring.
- Other strategies, [see Section 7, Diagnostic and Hypertension Management Office Visits].

Counseling Framework

The CDC WISEWOMAN Program has adopted the use of client-centered risk counseling and health coaching using motivational interviewing techniques. The primary goal of motivational interviewing is to guide the client in understanding the reasons for her mixed feelings about a desired behavior change and to identify internal motivations that will help her move past her hesitation or unwillingness to make a behavior change.

With motivational interviewing, the provider seeks to understand the client's perspective, recognizing that clients who need to make changes are at different levels of readiness to do so. It affirms that the client has the freedom to choose whether to make behavior changes and that the way changes are made is self-directed by the client. Motivational interviewing is non-judgmental and involves collaboration, not confrontation, evocation, not education, autonomy rather than authority, and exploration rather than explanation. Effective processes for change focus on goals that are client-identified, specific and realistic.

Motivational Interviewing

An initial motivational interviewing (MI) training is required for all WISEWOMAN staff who have no previous MI training. The one to two-day training will be provided through collaboration with state partners, e.g., Department of Health Services Chronic Disease Prevention and Tobacco Prevention and Control programs, MetaStar and other local organizations.

Annually, WISEWOMAN team members' MI skills will be assessed by the provider organization and further training/refresher opportunities will be provided as needed. Providers are also strongly encouraged to access self-study online MI and health coaching training opportunities such as those listed below whenever possible. Some of these trainings offer CEUs and have pre- and post-assessments.

Section 5 Service Flow

Flow Diagram for WISEWOMAN Program Services

The WISEWOMAN services depicted below are within the Health Systems and/or Community Clinical Linkages Domains.

Rescreen (12–18) months after previous screening

Office Appointment Process

1. Remind client of the appointment time, date, and location of the IOV at least one week prior to the appointment date. This will help to prompt the client to fast nine hours prior to the appointment for best results. The provider organization can use any of the following reminder methods:
 - a. Phone
 - b. Post card mailing
 - c. Text messaging
2. The provider organization should also arrange to call the client on the telephone or text message her the day prior to the appointment date to again remind her of the time and location of the IOV and fasting needs.
3. If the client is on medication for blood pressure or cholesterol, the client is strongly advised to take her medication with a sip of water (non-caloric intake) prior to the appointment. However, the client should always comply with her doctor's directions related to taking her medication.
4. If needed, the provider organization should arrange for assistance with transportation and/or onsite childcare to help the client participate in WISEWOMAN services.
5. If the client does not keep her appointment, attempts to reach her for rescheduling the appointment by phone, mail or text messaging should be implemented.

Screening - Integrated Office Visit (IOV)

Client Consent

The WISEWOMAN provider organization must have the client review and sign the WISEWOMAN client consent form prior to receiving services. The [program consent form](#) will give clients information on the services provided, including screening, rescreening, community resource referrals, medical follow-up (if required), possible risks and the potential benefits of their involvement in the program, protection of identifiable information, and use of information for monitoring and evaluation. When a client signs the form, she is acknowledging that she understands the WISEWOMAN services and has knowingly agreed to participate in the program. A copy of the form should be given to the client.

Health Risk Assessments (Health History and Healthy Lifestyle)

The cardiovascular health and lifestyle assessments are completed and entered in the program data system at baseline, rescreening, and follow-up screening visits.

For the cardiovascular conditions, in addition to the client self-reporting, the program will need to know whether the client has a confirmed diagnosis of either hypertension, diabetes, or high cholesterol, evident by an ICD code recorded in the client's medical record. This could be either a new diagnosis or an already established diagnosis.

Health risk assessments are used to provide data to calculate individual cardiovascular risk and support the patient-centered risk counseling interaction and health coaching process. The assessments also establish baseline health behaviors and practices to measure any changes at follow-up screening and rescreening. The following forms should be used:

[WISEWOMAN Client Health History Assessment](#) form and [WISEWOMAN Client Healthy Lifestyle Assessment](#) form. The information should be entered in the Med-IT® data management system.

The WISEWOMAN provider organization must make sure that the client has answered all the relevant questions during the assessment intake as specifically as possible so that the answers will provide meaningful program data. Answers such as "don't know," "don't want to answer," or those left blank do little to contribute to outcome data analysis and overall evaluation of the program. If answers seem inappropriate, conduct further clarification with the client to attain a more accurate response. Responses to the health risk assessments must be available to the WISEWOMAN screening provider at the time of the IOV.

Clinical Screening Measurements

Ideally the client will get her blood tests and lab results the same day, during the Integrated Office Visit. If “point of service” testing is not available, the provider may have the client’s blood drawn prior to the visit. However, the provider still must comply with conducting IOV procedures, (e.g., reviewing health history, healthy lifestyle and tobacco assessments, lab and clinical procedures, patient-centered risk counseling, and making appropriate referrals as needed) all at the same visit. **Fasting tests are required.** Clients should fast a minimum of nine hours prior to fasting tests. If fasting lab procedures are performed prior to the WISEWOMAN screening office visit, the labs must have been completed within the past 30 days. However, for the A1c test, values can be collected anytime within the past 90 days.

Time Frame for Completing Screening Services

Since all screening measurements and assessments are to be used to determine participation in healthy behavior support service linkages and/or bi-directional referrals to community-based resources, it is expected that all labs and other screening services will be completed within **as short a time frame as possible.**

The medical provider will assess the following during the IOV using the [WISEWOMAN Screening Activity](#) form. The information should be entered in the Med-IT® data management system.

1. Client Health History (CVD risk or current disease level, medication adherence, aspirin therapy, blood pressure self-monitoring).
2. Healthy Lifestyle (food groups, eating patterns, physical activity levels, tobacco use, alcohol use, depression).
3. Blood Lipids: CPT code: Fasting 80061 (lipid profile).
4. Blood Glucose: CPT code: Fasting 82947.
5. A1c: CPT code: 83036. Screening for known diabetes or Screening high risk for diabetes. See [Issues Related to the use of the A1c with Screening And/or Diagnosis of Diabetes](#).
6. Height and weight measurements to calculate Body Mass Index (BMI) and waist measurement.
7. Three blood pressure measurements separated by one to two minutes. See pages 29–32 for Blood Pressure measurement guidelines.

***If Cholestech cannot calculate an LDL, the provider must do an LDL direct lab test. The lab results must be entered into the program data base and communicated to the client.**

Waist Circumference³

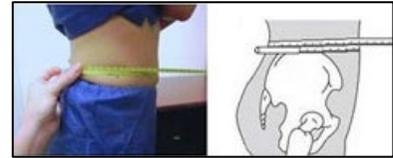

According to the National Institutes of Health, waist circumference is associated with obesity or overweight and insulin sensitivity. Waist circumference can be used as a screening tool but is not diagnostic of BMI or the health of an individual. If most of the fat is around the waist rather than the hips, the client is at a higher risk of heart disease and type 2 diabetes. Although waist circumference and BMI are interrelated, waist circumference provides an independent prediction of risk over and above that of BMI.

The waist circumference measurement is particularly useful in clients who are categorized as normal or overweight in terms of BMI. The risk goes up in women who have a waist size that is greater than 35 inches (88 cm).

³ NIH “The Practical Guide- Identification, Evaluation, and Treatment of Overweight and Obesity in Adults”

To correctly measure waist circumference:

1. Have the client stand, locate the upper hip bone and the top of the right iliac crest.
2. Place the tape in a horizontal plane around the client's bare abdomen at the level of the iliac crest.
3. Make sure tape is horizontal around the waist and is parallel to the floor.
4. Keep the tape snug around the waist, but not compressing the skin.
5. The measurement is made at the end of a normal expiration (after she breathes out).

Waist Circumference Resources

- [Waist Circumference Measurement Guidelines](#)
- [Navy Body Composition Assessment \(BCA\)](#) (You will need to fast forward to the waist measure portion of the video.)

Depression Screening⁴

Depression is one of the leading causes of disability in adults. Depression has a major impact on a person's quality of life and can increase the risk of suicide. It can make it more difficult for people to care for other health conditions they may have. Depression also can affect family members, especially children. The U.S. Preventive Services Task Force recommends screening in adolescents and adults in clinical practices that have systems in place to ensure accurate diagnosis, effective treatment and follow-up. The Patient Health Questionnaire PHQ2 and PHQ9 are commonly used validated screening tools.

The goal of screening is to identify WISEWOMAN clients who may have depression. The PHQ-2 is a short questionnaire that asks clients to report how often over the past two weeks they are bothered by:

- a. problems such as a lack of pleasure in doing things.
- b. sad or hopeless feelings.
- c. sleep problems.
- d. trouble concentrating.

The PHQ-2 also asks whether these problems are having an impact on the client's ability to carry out daily activities.

The responses to each of these questions are given a score as follows:

Score	Frequency
0	Not at all
1	Several days
2	More than half
3	Nearly every day

Interpretation

The PHQ-2 score is obtained by adding the score for each question, then totaling points. A PHQ-2 score ranges from 0-6. A score of 3 is considered as the optimal cut point when using the PHQ-2 to screen for depression. If the PHQ-2 screening is positive for depression, the client should be given a PHQ-9 screening. If this screening is positive, the provider organization should have resources in place to refer the client for further evaluation.

The WISEWOMAN provider will review the screening results, provide risk counseling, arrange for medication needs, and make necessary referrals. This may include the need for medical follow-up for hypertension management or referrals for a diagnostic office visit or to an outside provider for abnormal screening results [see Section 6 Follow-up on the [WISEWOMAN Screening Activity](#) form].

The provider organization must have an effective referral system in place to ensure appropriate clinical-community resources [see Details in Sections 8 and 9].

⁴ <https://www.uspreventiveservicestaskforce.org/uspstf/recommendation/depression-in-adults-screening>

Section 6: Risk Counseling

Risk Counseling Using Motivational Interviewing

Client-centered risk counseling is a major component of the WISEWOMAN program. Risk counseling skillfully provided can help WISEWOMAN participants become effective and informed managers of their health and health care. Risk counseling should be conducted by the medical provider.

Studies indicate that clients who are engaged and actively participate in their own care have better health outcomes. During the face-to-face counseling, the medical provider should:

1. Consider the client’s language, health literacy, and cultural background in the interaction.
2. Discuss the client’s screening and health risk assessment results using the [WISEWOMAN Screening and Healthy Behavior Support guide](#) to give the results in writing.
3. Assure the client understands her cardiovascular risk(s).
4. Determine the client’s readiness to make behavior change(s). See the [WISEWOMAN Stages of Change Tip sheet](#).
5. Ask the client what changes she is ready to make.
6. The health coach meets with the client to:
 - a. Conduct the initial Healthy Behavior Support Service by collaboratively identifying a SMART goal and action steps to support the client’s priority goal (e.g., nutrition, physical activity, smoking cessation, blood pressure control, weight loss, reducing risk of diabetes)[see Section 10, Healthy Behavior Support Services].
 - b. Facilitate access to Healthy Behavior Support Service option(s) (Lifestyle Program or Health Coaching) through bi-directional referral and reporting.
 - c. Indicate which Healthy Behavior Support Service option the client selected.

The information should be entered in the Med-IT® data management system.

Some conversation comments/questions to get you started.

- *Today’s screening will help you identify your risks at this time. Let’s review the results of your screening.*
- *If it is OK with you, I would like to explain a little more about your results.*
- *What do these results mean to you?*

Section 7: Hypertension Management

AHA/ACC 2017 Guidelines

The 2017 Guideline for the Prevention, Detection, Evaluation and Management of High Blood Pressure in Adults changes the definition of hypertension, which is now any systolic blood pressure measurement of 130 mm Hg or higher, or any diastolic blood pressure measurement of 80 mm Hg or higher.⁵ Because the new definition sets a lower threshold for hypertension diagnosis, more people will be classified as having hypertension. Other statistics in the updated guidelines show that only about 20% of people with hypertension followed their treatment plan well enough to improve, and up to 25% of them fail even to fill their initial prescription.

The 2017 Guidelines are intended to define practices in meeting the needs of patients in most, but not all, circumstances and should not replace clinical judgment. The guidelines focus on targets and goal-oriented blood pressure treatment that are based on the patient's health history, health status, and risk assessment. Several different blood pressure thresholds and goals for the long-term treatment of hypertension with pharmacological therapy are recommended.

Blood Pressure Categories

BLOOD PRESSURE CATEGORY	SYSTOLIC mm Hg (upper number)		DIASTOLIC mm Hg (lower number)
NORMAL	LESS THAN 120	and	LESS THAN 80
ELEVATED	120 – 129	and	LESS THAN 80
HIGH BLOOD PRESSURE (HYPERTENSION) STAGE 1	130 – 139	or	80 – 89
HIGH BLOOD PRESSURE (HYPERTENSION) STAGE 2	140 OR HIGHER	or	90 OR HIGHER
HYPERTENSIVE CRISIS (consult your doctor immediately)	HIGHER THAN 180	and/or	HIGHER THAN 120

©American Heart Association

heart.org/bplevels

Focus of 2017 Guidelines

1. New definitions for hypertension
2. New blood pressure goals
3. New targets for people with comorbidities
4. Updated recommendations for special populations
5. Accuracy of measurement
6. Benefits of lifestyle therapy
7. New recommendations for treatment protocols and follow-up
8. Pharmacological recommendations
9. Quality improvement activities and system changes
10. Assessing the 10-year risk for heart disease and stroke using the atherosclerotic cardiovascular disease risk calculator
11. Self-monitoring of blood pressure with clinical support
12. Team-based care interventions
13. Motivational techniques and 1:1 counseling
14. Value of social and community support services
15. Information technology-based strategies to promote control

⁵ 2017 ACC/AHA/AAPA/ABC/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines

Validation of the Client’s Diagnosis

In addition to the client self-reporting, the program will need to know whether the client has a confirmed diagnosis of hypertension, evident by an ICD code recorded in the client’s medical record. This could be either a new diagnosis or an already established diagnosis.

Recommendations for Accurate Blood Pressure Measurements

Accurate blood pressure measurements are critical for detecting and managing high blood pressure.

Multiple outside forces can contribute to blood pressure variability. The following is a list of common actions that result in inaccurate blood pressure readings that can easily be controlled.⁶

Cause	Systolic Effect	Cause	Systolic Effect
1. The cuff is too small (one of the most common causes of error in clinical practice).	+10-40 mmHg	9. Patient in pain	+10-30 mmHg
2. The cuff is too large (one of the most common causes of error in clinical practice).	-5-25 mmHg	10. Patient talking	+10-15 mmHg
3. The artery line is not centered.	+4-6 mmHg	11. Patient has full bladder.	+10-15 mmHg
4. The arm is above heart level.	+2 mmHg per inch	12. Patient has difficulty breathing.	+5-8 mmHg
5. The arm is below heart level.	- 2 mmHg per inch	13. Patient does not rest 3-5 minutes.	+10-20 mmHg
6. Patient’s feet are not flat on the floor.	+5-15 mmHg	14. White Coat Syndrome	+11-20 mmHg
7. Patient’s back is not supported.	+5-15 mmHg	15. Tobacco or caffeine use	+6-11 mmHg
8. Legs crossed	+ 5-8 mmHg	16. Cuff is placed over clothing.	+/-10-40 mmHg

Aneroid devices that are out of calibration most often read too low.

⁶ Improving the Screening, Prevention & Management of Hypertension – An Implementation Tool For Clinic Practice Teams, Washington State Department of Health

Checklist for Accurate Measurement of Blood Pressure⁷

Key Steps for Proper BP Measurements	Specific Instructions
Step 1: Properly prepare the patient.	<ol style="list-style-type: none"> 1. Have the patient relax, sitting in a chair (feet on floor), back supported for >5 minutes. 2. The patient should avoid caffeine, exercise, and smoking for at least 30 minutes before measurement. 3. Ensure patient has emptied his/her bladder. 4. Neither the patient nor the observer should talk during the rest period or during the measurement. 5. Remove all clothing covering the location of cuff placement. 6. Measurement made while the patient is sitting or lying on an examining table do not fulfill these criteria.
Step 2: Use the proper techniques for BP measurements.	<ol style="list-style-type: none"> 1. Use a BP measure device that has been validated, and make sure that the device is calibrated periodically. 2. Support the patient's bare arm, (e.g., resting on a desk palm up). 3. Position the middle of the cuff on the patient's upper arm at the level of the right atrium (the midpoint of the sternum). 4. Use the correct cuff size, such that the bladder encircles 80% of the arm, and note if a larger – or smaller-than-normal cuff size is used. 5. Either the stethoscope diaphragm or bell may be used for auscultatory readings.
Step 3: Take the proper measurements needed for diagnosis and treatment of elevated BP/hypertension.	<ol style="list-style-type: none"> 1. At the first visit, record BP in both arms. Use the arm that gives the higher reading for subsequent readings. 2. Separate repeated measurement by 1–2 minutes. 3. For auscultatory determinations use a palpated estimate of radial pulse obliteration pressure to estimate SBP. Inflate the cuff 20-30 mm Hg above this level for an auscultatory determination of the BP level.
Step 4: Properly document accurate BP readings.	<ol style="list-style-type: none"> 1. Record SBP and DBP. If using the auscultatory technique, record SBP and DBP as onset of the first Korotkoff sound and disappearance of all Korotkoff sounds, respectively, using the nearest even number. 2. Note the time of most recent BP medication taken before measurements.
Step 5: Average the readings.	<ol style="list-style-type: none"> 1. Use an average of ≥ 2 readings obtained on multiple occasions to estimate the individual's level of BP.
Step 6: Provide BP readings to patient.	<ol style="list-style-type: none"> 1. Provide clients the SBP/DBP readings both verbally and in writing.

Recommended Cuff Sizes

Recommended cuff sizes	
Arm Circumference	Adult Cuff Size
22 to 26 cm	Small adult (12x22 cm)
27 to 34 cm	Adult (16x30 cm)
35 to 44 cm	Large adult (16x36 cm)
45 to 52 cm	Adult thigh (16x42 cm)

Manufacturers' cuff sizes differ widely as to what they consider a large/small size, etc. Providers are encouraged not to rely solely on the manufactures' markings as to cuff size. Instead they should measure the bladder of each cuff before placing it into initial service.

⁷ 2017ACC/AHA/AAPA/ABCA/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults

Accurate Blood Pressure Measurement Resources

Section 8: Referrals for Diagnostic, Hypertension Management, and Medical Follow-Up Office Visits

Diagnostic Office Visit(s) Protocols

1. The WISEWOMAN medical provider will review the results from the Health History, Healthy Lifestyle Assessment, blood pressure assessment, anthropometric screening, and lab values to determine the client's current health status and whether there is a need for a diagnostic office visit, referral for medical follow-up for abnormal screening results, or for additional office visits for hypertension management.
2. Diagnostic Office Visits are covered only for limited circumstances. The medical provider will determine the need for follow-up visits based on criteria as indicated in this section.

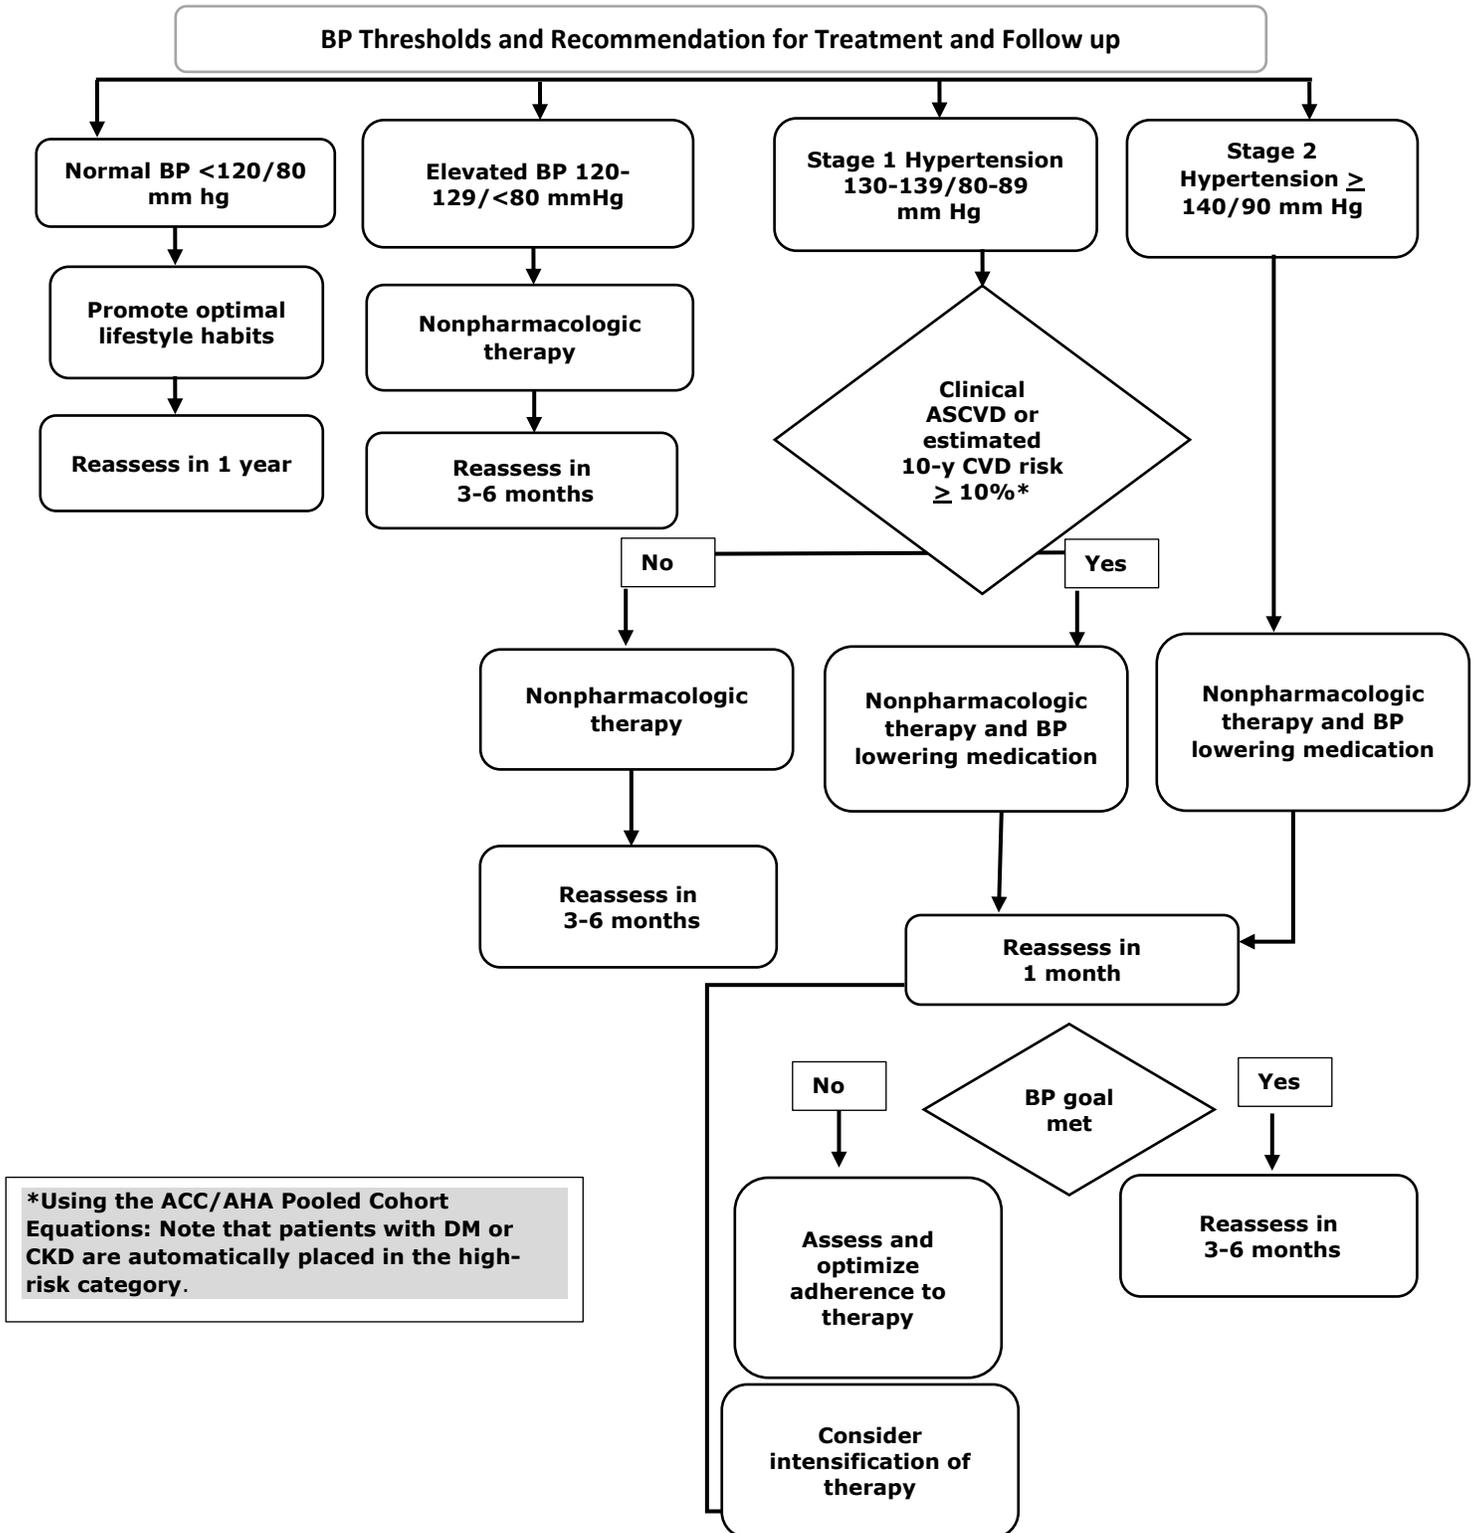

Mandatory Visits for Alerts

WISEWOMAN alert laboratory values indicate the need for immediate attention. They are based on current clinical practice and risk to the individual's health. The provider organization must ensure these clients receive medical evaluation and treatment either **immediately or within seven calendar days** of the alert measurement, in accordance with national standards and the judgment of the WISEWOMAN medical provider.

1. Alert Values
 - a. Blood Pressure alert values: systolic >180 mm Hg or diastolic >120 mm Hg.
 - b. Blood Sugar alert values: fasting blood glucose value \geq 250 mg/dL unless known to have diabetes.
2. The WISEWOMAN diagnostic medical provider will conduct the diagnostic office visit for clients with **alert** values and document in the Med-IT® database. See the [Diagnostic and Hypertension Management Referral](#) form.
3. If the client cannot arrange to be seen by a medical provider within the allotted seven calendar day period, case management services must be implemented with attempts to get the client to return for follow-up. Case management services must be documented in the Med-IT® database in the client's Cycle Notes. See [Case Management](#).
 - a. Case management is a short-term intensive support service used to ensure that clients receive appropriate and timely medical care. Case management also assists clients in understanding the treatment regimen, obtaining affordable medication, and attending medical appointments and/or reducing other barriers.
4. If the client refuses a diagnostic office visit for alert values, the medical provider will inform the client of the benefits of receiving, and the health consequences of refusing, follow-up. The provider will complete the case management notes and enter in the Med-IT® database in the client's Recall Activity screen.

Referral Hypertension Protocols⁸

- The WISEWOMAN medical provider will determine whether the client needs a referral for abnormal blood pressure according to the following blood pressure readings:

⁸ 2017 Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults—Guidelines Made Simple, A Selection of Tables and Figures

2. Providers are expected to conduct additional services for hypertension management using established protocols and strategies, (e.g., medication therapy management, blood pressure self-monitoring).
3. The program will cover up to five hypertension management office visits, as well as up to five health coaching sessions.
4. The goal is to achieve the client’s individual goal. This is usually less than 130/80.
5. In addition, the program will provide health coaching or lifestyle programs for health behavior modification for clients who have abnormal blood pressure.
6. Providers who conduct a Therapeutic Lifestyle Change (TLC) discussion during the visit can record the intervention as a health coaching encounter if the following activities take place:
 - a. Discussion is done in the Spirit of MI and documentation supports the conversations addressing progress, barriers and community resources.
 - b. Conversation is at least 10-15 minutes.
 - c. The client identifies or re-commits to a SMART goal.
7. The WISEWOMAN diagnostic medical provider will conduct the hypertension management visits and document them in the Med-IT® database. See the [Diagnostic and Hypertension Management Referral](#) form.
8. If the client receives a bi-directional referral back to her own provider for hypertension management, or referral for abnormal screening results, the medical system to which the woman is referred is then responsible for providing medical follow-up and ensuring treatment.
9. If the client refuses follow-up visits for hypertension management, or referral for abnormal screening results, the medical provider will inform the client of the benefits of receiving, and the health consequences of refusing, follow-up.

Diabetes and Hypertension Considerations

The American Diabetes Association Standards of Medical Care in Diabetes indicates the following:

1. For clients with diabetes and hypertension, blood pressure targets should be individualized through a shared decision-making process that addresses cardiovascular risk, potential adverse effects of antihypertensive medications and patient preference.
2. For individuals with diabetes and hypertension at higher cardiovascular risk (existing atherosclerotic cardiovascular disease or 10-year ASCVD risk of > 15%), a blood pressure target of <130/80 mm Hg may be appropriate if it can be safely attained.
3. For individuals with diabetes and hypertension at lower risk for cardiovascular disease (10-year ASCVD risk <15%), treat to a blood pressure target of <140/90 mmHg.
4. ADA also recommends that all hypertensive clients with diabetes should monitor their blood pressure at home.

Hypertension Management Strategies

Improving control of hypertension is a major focus of the WISEWOMAN Program. Providers are expected to conduct additional preventive services for clients who need hypertension management by using established protocols or by strengthening their existing hypertension control protocols.

The following are examples of a wide variety of available evidence-based hypertension management resources.

Strategy	Description	Examples
Delivery system design	Processes to be efficient for clients and staff; consistently deliver quality care, reliably document care	Prescribing anti-hypertensive medication consistent with national guidelines Streamlining patient registration processes to minimize waiting time
Self-management support	Activities to increase clients’ skills in managing their own health	Teaching clients how to measure and track their blood pressure

Decision support	Automated messages for clinicians	Using computer-generated prompts to remind a clinician that a patient’s blood pressure is abnormal and to consider adjusting medication
Health information technology (Health IT) <i>Note: Health IT can be used to implement decision support or delivery system design.</i>	Storage, retrieval, sharing and use of health care information and data for communication and decision-making	Use Health IT reports to determine which clients with hypertension are not well controlled Use Health IT reports to determine which clients have not returned for follow-up

Approaches Shown to be Effective in Controlling Hypertension

Self-Measured Blood Pressure Monitoring (SMBP) with Support

SMBPs are blood pressure readings taken by the client outside of a clinical setting. Readings are shared with the medical provider who then provides advice or makes needed adjustments in medications.

Blood pressure readings taken in community settings (church, pharmacy, etc.) do not fall under the definition of SMBP. Clients selecting SMBP must agree to the intervention guidelines and sign the [WISEWOMAN Client Home Blood Pressure Monitoring Agreement](#) form.

Self-Measured Blood Pressure Monitoring Resources

- **[MetaStar Health Care Improvement](#)**: E-learning module | Patient Self-Measurement of Blood Pressure
The 35-minute module divided into eight sections. The eighth and last section is devoted to test questions. The modules provide an overview of proper patient education in self-measurement of blood pressure (SMBP) for ambulatory clients using evidence-based research. Providers can choose to view sections of the module as time permits. It is not necessary to complete the module in one sitting.
- **[Target: BP](#)**
 - **How to Use Your Home Blood Pressure Monitor**
This patient-friendly video from the National Association of Community Health Centers (NACHC) outlines clear instructions for using home blood pressure monitors to measure and track blood pressure. The video is also available in Spanish and can be downloaded in English or in Spanish.
 - **SMBP Training Video**
This educational video from the American Medical Association helps train care teams and clients on how to properly measure blood pressure. This video is also available in Spanish.
 - **Using Self-Measured Blood Pressure (SMBP) to Diagnose and Manage High Blood Pressure**
This webinar reviews the benefits of using SMBP, illustrates techniques and protocols to help clients self-monitor their blood pressure, and describes how clinicians can set up SMBP programs in their practice.
 - **Self-Measured Blood Pressure Monitoring to Control Hypertension**
This Medscape video highlights ways health care providers can help clients manage hypertension. (To view the video, you may have to register with Medscape.)

Team-Based Care (TBC)

The Community Prevention Task Force recommends TBC to improve BP control. Team-Based Care is a health system or an organizational intervention that integrates a multidisciplinary team to improve the quality of hypertension care for clients. Team-based care is established by adding new staff or changing the roles of existing staff to work with a primary care provider.

Each team includes the client, the client’s primary care provider and other professionals such as nurses, pharmacists, dietitians, social workers, and community health workers. Team members provide process support and share responsibilities of hypertension care to complement activities of the primary care provider. These responsibilities include medication management, patient follow-up, and adherence and self-management support. ⁹

Team-Based Care Resources

- [Centers for Disease Control and Prevention - Promoting Team-Based Care to Improve High Blood Pressure Control](#)
- [World Health Organization - HEARTS Technical package for cardiovascular disease management in primary health care — Team-Based Care](#)

Medication Adherence and Access Support

Medication adherence refers to the client’s act of conforming to the recommendation made by the provider with respect to timing, dosage and frequency of medication taking. Medication adherence is associated with increased control, lower hospitalization rates, improved cost benefits, improved quality of care, and improved health outcomes. Provider client discussions should also include explaining what the medication is intended to do, tolerance and appropriateness of medication, and ability to access affordable medication.

Medication Adherence and Access Resources

[Million Hearts](#)

This document provides tools and implementation guides to support evidence and practice-based medication adherence strategies for health practitioners. The website also includes an interactive module developed by the American Medical Association. The module helps providers identify and address medication nonadherence and change behaviors. Patient self-help videos on how to take medicine as directed, and tips for taking blood pressure medicines, are provided in English and Spanish.

Other Abnormal Screening/Laboratory Values

Diagnostic visits for abnormal findings are covered only under limited circumstances. The diagnostic office visit for abnormal findings is not intended to monitor the status of treatment or to provide patient education. WISEWOMAN abnormal values are laboratory results that indicate the need for follow-up attention. They are based on current clinical practice and risk to the individual’s health. There are exceptions for hypertension management.

1. The WISEWOMAN Program will reimburse for **one** diagnostic office visit for abnormal findings when based on program-specified criteria. The diagnostic office visit may only be reimbursed when **one or both of the following two situations occur**:
 - a. Further evaluation is needed to confirm whether the client has a new diagnosis of high blood pressure, dyslipidemia or diabetes. The diagnosis must be validated (ICD code(s) in the client’s medical record.
 - b. Further evaluation is needed to determine if medication or other more immediate treatment is needed that could not be appropriately assessed/done during the IOV.
2. Lipids Abnormal Values – may refer for one DOV at provider’s discretion for:
LDL \geq 130 mg/dL.
*If the Cholestech cannot calculate a LDL, the provider must do an LDL direct lab test. The lab results must be entered into the WISEWOMAN Med-IT® base and communicated to the client. This may or may not necessitate a DOV visit.
3. Blood Sugar Abnormal Values— may refer for one DOV at provider’s discretion to assess a diagnosis for diabetes.

⁹ <https://www.thecommunityguide.org/findings/cardiovascular-disease-team-based-care-improve-blood-pressure-control>

- a. Fasting blood glucose value \geq 126 mg/dL
 - b. A1c \geq 6.5%
4. Stage 1 or higher blood pressure measurements status must be referred for hypertension management. Client may have up to five office visits for hypertension management.

Abnormal Values That Do Not Qualify for a Diagnostic Office Visit

Clients with impaired fasting glucose or the elevated blood pressure designation according to the 2017 Hypertension Guidelines, DO **NOT** qualify for a DOV and should:

1. Receive risk factor counseling/education during the IOV.
2. Be referred for a Healthy Behavior Support Service option.
3. Be referred to a medical provider or community resources if in need of periodic blood glucose and/or blood pressure monitoring.

Provider Organization Responsibilities for Diagnostic or Hypertension Management Referral

The WISEWOMAN medical provider will determine whether the client needs a referral for a **diagnostic office visit** according to the following:

Normal Values	Abnormal Values	Alert/Crisis Values
Client does not receive a referral for a WISEWOMAN DOV.	The WISEWOMAN medical provider may arrange for one DOV appointment according to specified criteria for the client at his/her discretion. This visit must be completed within six weeks of the IOV. EXCEPTIONS: Clients with abnormal blood pressure (Stage 1 or higher) must be referred (unless they refuse) to a hypertension management program. There may be exceptions to this based on the health care provider's clinical judgement. Up to five office visits are allowed for this follow-up.	Client will receive a referral for a WISEWOMAN DOV. This visit must be completed immediately or within one week (seven calendar days) of the IOV.

Reimbursement guidelines are not a substitute for clinical guidelines or clinical judgment. Clients with disease level blood pressure or lab values needing ongoing care must be referred for further diagnostic services or for a medical service.

If the WISEWOMAN medical provider wants to conduct a DOV for a client with a combination of abnormal values that do not meet the criteria specified above, they may contact the WISEWOMAN program service delivery coordinator for guidance. The service delivery coordinator will consult with the WISEWOMAN medical director for possible authorization for further testing on a case-by-case basis.

Service Provider Responsibilities at the Diagnostic and/or Hypertension Management Office Visit

The WISEWOMAN diagnostic medical provider will:

1. Review the clinical information in the client's screening activity reporting module and provide additional WISEWOMAN covered assessment services and diagnostic tests as needed. See [Diagnostic and Hypertension Management Referral](#).
2. Implement case management services if the client does not show up for the DOV or the hypertension management visit to determine reason(s) and attempt to get the client to come to the appointment.
3. If needed, help with obtaining access to prescribed medications, supplies and/or linkages for their continuing follow-up care.
4. If for HTN management, document blood pressure re-measurements including dates.
5. Assure WISEWOMAN clients with alert or abnormal values are linked to free or low-cost continuing care services when indicated unless the client refuses.
 - a. The medical system to which the woman is referred to is responsible for providing medical follow-up and ensuring treatment.
 - b. It is important to ensure women with alert or abnormal values who need ongoing care are directed to a health care provider who will see them regardless of their financial status or circumstances.
6. Providers who conduct a Therapeutic Lifestyle Change (TLC) discussion during the DOV or hypertension management visits can record the intervention as a health coaching encounter if the following activities take place:
 - a. Discussion is done in the spirit of MI and documentation supports the conversation addressing progress, barriers, and community resources.
 - b. TLC conversation is at least 10-15 minutes.
 - c. The client identifies or re-commits to a SMART goal.

Cardiovascular Disease Management Resources

- [Target: BP American Heart Association](#)
This national initiative aims to reduce the number of Americans who have heart attacks and strokes by urging medical practices, health service organizations, and clients to prioritize blood pressure control. Target: BP supports physicians and care teams by offering access to the latest research, tools, and resources to reach and sustain blood pressure goal rates within the patient populations they serve.
- [Target: Type 2 Diabetes American Health Association](#)
National initiative that aims to prioritize management of type 2 diabetes and cardiovascular risk factor in outpatient care. Target: Type 2 Diabetes and its related resources at Know Diabetes by Heart, provides clinicians and patients with access to a variety of resources to help them understand and manage chronic disease. The initiative offers state and national recognition for health care organizations that commit to, and achieve success, as defined by statistical benchmarks.
- [Million Hearts® toolkits](#)
Practice and informational toolkits designed to help partners incorporate Million Hearts® into their everyday work and enhance community heart disease and stroke prevention efforts.
- [The Atrium Wisconsin's Clearinghouse for the Million Hearts®](#)
A web portal powered by MetaStar provides resources and information on cardiac health initiatives in Wisconsin.
- [CDC Sodium Reduction Resources](#)

- [Centers for Disease Control and Prevention, Division for Heart Disease and Stroke Prevention](#)
Provides data, training webcasts, and webinars and educational materials on a variety of heart disease and stroke topics.
- [2017 ACC/AHA/AAPA/ABC/ACPM/AGS/APhA/ASH/ASPC/NMA/PCNA Guideline for the Prevention, Detection, Evaluation, and Management of High Blood Pressure in Adults: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines](#)
- [Standards of Care in Diabetes 2021](#)
The diagnosis and management of diabetes should be done according to the current American Diabetes Association's Standards of Medical Care for Diabetes Mellitus. These guidelines are reviewed and updated annually.
- [2018 AHA/ACC/AACVPR/AAPA/ABC/ACPM/ADA/AGS/APhA/ASPC/NLA/PCNA Guideline on the Management of Blood Cholesterol: A Report of the American College of Cardiology/American Heart Association Task Force on Clinical Practice Guidelines](#)

Section 9: Community–Clinical Resources

Identifying Community Resources

The provider organization will conduct an annual community scan of each community they serve. The goal of the scan is to identify existing resources in the community that support healthy lifestyles, e.g., free and/or low-cost programs that support chronic disease self-management, physical activity, nutrition, tobacco cessation, blood pressure measuring services, etc. When determining community-clinical resources, the provider should consider the likelihood of having a bi-directional referral procedure in place with the referring agency. However, not all the community resources will require a bi-directional referral procedure, e.g., walking in the mall or park.

The WISEWOMAN provider organization may also refer clients to additional resources that offer support for specific challenges they may be facing. These resources might include:

- Mental health services
- Translation services
- Job training
- Oral health services
- Housing
- Violence prevention services

Community Linkages

The WISEWOMAN client should be referred to community-based resources to support identified goals. Typically, initial referrals occur during risk counseling, but may also occur during other program services such as lifestyle programs, health coaching sessions, and/or follow-up diagnostic/management services.

Bi-Directional Referral Process

Successful bi-directional referral includes both the referral information going from the WISEWOMAN provider to the evidence-based healthy behavior support services and/or community-clinical resources and the information flowing back to the health care provider on the client's participation, as well as any outcomes such as weight loss or blood pressure readings. The referral system may include any electronic, telephonic, fax-based, web-based, or paper-based system that tracks and receives data for all clients that have been referred to a community-clinical service. Any bi-directional referrals should be entered in the Med-IT® data management system.

Healthy Behavior Support Services (HBSS)

The aim of HBSS is to provide skills, support and information that supports the client's ability to integrate healthy behaviors into her daily life.

Criteria for HBSS

1. Be evidence-based or viewed as "promising" (created on evidence-informed activities).
2. Show effectiveness in improving diet, physical activity, weight loss and chronic disease management with emphasis on hypertension.
3. Incorporate national diet and lifestyle recommendations.
4. Be culturally appropriate and delivered using easy-to-understand language.

All HBSS must be approved by CDC. The following are currently approved programs:

1. Health Coaching (HC)
2. Health Coaching Self-Monitoring Blood Pressure (HCwSMBP)
3. Diabetes Prevention Program (DPP)
4. Take Off Pounds Sensibly (TOPS)

5. University of Wisconsin Supplemental Nutrition Assistance Program - Education (SNAP- Ed)
6. ¡Venga y Relájese! (Stress Management Intervention) Approved as a promising HBSS
7. YMCA–Blood Pressure Self-Monitoring Program

If the provider organization has additional evidence-based/evidence-informed programs they would like considered, they must contact the WISEWOMAN program coordinator.

Assistance with Medication and Diabetes Supplies

Due to the federal funding requirements, WISEWOMAN funds cannot be expended on medication or diabetes supplies for clients. However, the WISEWOMAN provider organization will assist the client with obtaining access to necessary medications and supplies.

Potential Resources for Medication Assistance: Locally Operated Stores

Many locally operated stores offer low-cost generic prescription drug programs. Providers should check with each program for additional details as programs may change their criteria and or webpage name at any time.

Program	Description
Costco	Offers Member Prescription Program for cost savings on prescription medications.
CVS	Offers a health savings pass for a small annual enrollment fee.
Program	Description
K-Mart	Offers a prescription savings club, small annual enrollment fee.
Kroger	Offers a generic drug program, no membership fee, no income eligibility criteria.
Meijer	Offers select free prescriptions with a doctor's prescription, regardless of insurance or co-pay (Free antibiotics amoxicillin, cephalexin, SMZ-TMP (excludes suspension), ciprofloxacin 250, 500 and 750mg strengths (excludes suspension), ampicillin, penicillin VK. Free select prenatal vitamins).
Target	Offers specified generic drugs. There is no enrollment form or enrollment fee, and no income eligibility criteria.
Wal-Mart	Offers generic prescription drugs (includes Sam's Club pharmacies). There are no enrollment form, fee, or income criteria.

Potential Resources for Medication Assistance: Pharmaceutical Companies

Many pharmaceutical manufacturers offer patient prescription assistance programs. Some programs offer discounts for prescription drugs, including some mail order programs. There are programs that help with navigating the various prescription drug assistance programs.

Below are the most common prescription assistance programs.

NeedyMeds: Offers a searchable database for prescription assistance programs. The meds are listed by brand and generic names. The database offers access to many on-line applications.
PhRMA's Medicine Assistance Tool (MAT) Offers a listing of programs that help with supplies; eligibility varies by program. MAT is a search engine for many of the patient assistance resources offered by other biopharmaceutical industries.
Patients—RX Outreach Medications: Mail-order program for generic prescription drugs. No membership fee but must meet income eligibility criteria and complete an application form. Offers some discounted diabetic supplies. Phone: 888-769-1234.
Xubex Patient Assistance Program: Mail-order prescription drug program. Also provides some discounted medical supplies. No income criteria or enrollment fee but must complete an application form. Phone: 866-699-8239.

Potential Resources for Diabetes Supplies/Medication

This is a general guide gathered from various company websites. Since the eligibility guidelines for each patient assistance program are subject to change at any time, the provider organization should check that company's website for the most current program information before assisting with applications. The listing below is not intended to be all-inclusive.

Assistance Program	General Eligibility Criteria	Supplies Available
Abbott Diabetes Care Patient Assistance Program	Offers blood glucose meters and strips to qualifying applicants.	Freestyle meters/strips Precision meter/strips
Accu-Chek Patient Assistance Program Tel: 800-858-8072	Roche Diagnostic offers a limited supply of Aviva test strips to a network of community clinics and health centers to distribute to low-income and uninsured people with diabetes.	Test strips
Becton Dickinson Insulin Syringe Assistance Program Tel: 866-818-6906	Must meet financial and other program specific criteria and have no insurance.	BD ultra-fine insulin syringes; patient education materials
NeedyMeds	Provides streamlined information to patient assistance programs (medication and some diabetes supplies) via searchable database and linkages to individual enrollment criteria/applications.	Depends on the individual companies' medication, some meters, and test strips.
PhRMA's Medicine Assistance Tool (MAT)	Offers a listing of programs that help with supplies. Eligibility varies by program. MAT is a search engine for many of the patient assistance resources offered by other biopharmaceutical industries.	Lists opportunities to obtain glucose meters, test strips, insulin syringes, and more.
Xubex Tel: 866-699-8239	No enrollment fee. There is an administrative fee for each prescription.	Discounts on some glucose meters, testing strips, lancets.

Smoking Cessation

The Centers for Disease Control and Prevention requires National Breast and Cervical Cancer Early Detection Program grantees to assess all enrolled clients for tobacco use status and promote tobacco cessation services. WISEWOMAN is committed to promoting tobacco cessation to all clients enrolled in the program.

- Clients who use tobacco should be provided Quit Line materials. Providers are encouraged to give clients information on tobacco risks and benefits of quitting, however, providing education materials is not a referral.
- Clients who express interest in quitting, including identifying smoking cessation as a priority during risk counseling and/or health coaching, should be given a referral to the [Wisconsin Tobacco Quit Line](#). The referral requires that the provider contact the client to determine her activity/outcome status. The status should be recorded in the WISEWOMAN Med-IT® data management system.

Wisconsin Tobacco Quit Line: 1-800-QUIT-NOW (1-800-784-8669)

The Wisconsin Tobacco Quit Line offers free, confidential, non-judgmental coaching, and information about how to quit. Quit coaches help each caller develop an individualized quit plan, including selecting a quit date. The Quit Line also sends callers a free quit guide with information about quitting methods, medications, and other tips. The coach can also provide a list of community tobacco cessation programs.

Wisconsin Tobacco Quit Line— Fax to Quit Service

Fax to Quit is a program that links the services of the Wisconsin Tobacco Quit Line directly to the potential quitter with the help of health care providers. Tobacco users no longer have to take the first step in calling the Quit Line. Instead, a quit coach will contact the tobacco user to provide an intervention(s) after receiving a faxed consent form. Clients must be ready to make a quit attempt, preferably within 30 days. The program is not designed to convince a smoker to quit. Clients may also initiate calls to the Quit Line at any time.

One-call Intervention

1. Generally, there is a 20 to 40-minute assessment of tobacco use history, previous quit attempts, relapse, and life experiences that may affect the quit attempt.
2. The quit coach stresses the importance of planning for a quit attempt and offers individualized counseling to help develop a plan.

Multi-call Intervention

1. During the one-call intervention, the caller may elect to receive up to four additional calls scheduled over six months.
2. Calls usually take place around the time of the quit date and provide the caller with practical strategies for successfully quitting.
3. Quit coaches help problem-solve with callers experiencing ongoing urges to use tobacco.
4. Coaches review nicotine replacement therapy usage to ensure safe, proper, and effective use.
5. Coaches identify methods callers may use to increase their support from family and friends.

To sign a program participant up for the Fax to Quit program, the provider organization program coordinator should contact their local [UW-Center for Tobacco Research \(CTRI\) Outreach Specialists](#) listed below.

Southeast Region	Allie Gorrilla	414-333-3067
Northwestern Region	Kris Hayden	715-204-8270 (cell) 715-830-5582
Northeastern Region	Sarah Thompson	920-370-9358
Southern Region	Amy Skora	608-219-8673

Section 10: Case Management

Case Management Protocols (Missed IOV, DOV)

- Case management is a short-term intensive support service used to ensure that women receive appropriate and timely medical care. Case management assists clients in understanding their treatment regimen, obtaining affordable medication, attending medical appointments, and/or reducing other barriers.
- Clients with abnormal blood pressure must be referred to a hypertension management program. The case manager will track the status of these clients.
- The medical system to which the woman is referred is responsible for providing medical follow-up and ensuring treatment.
- WISEWOMAN-funded case management services must end when:
 - The client with alert or elevated values begins receiving prescribed treatment.
 - The client is no longer eligible for WISEWOMAN services. For these clients, it is important to ensure they are directed to a health care professional who will see them regardless of their financial status or other circumstances before case management services stop.
 - The client has completed her healthy behavior support service and required follow-up screening visit.
 - The client is lost to follow-up after three recorded service contact attempts.
 - The client's blood pressure is in the controlled range.

Contacting Clients – MISSED Integrated Office Visit Appointments

The provider organization will contact clients to remind them of missed office visits. If the client makes an Integrated Office Visit (IOV) appointment but fails to show up, the provider organization will send a missed appointment notice to the client.

Contacting Clients – Missed HBSS Session(s)

The provider organization or HBSS provider organization will contact clients to remind them of missed HBSS encounters. The client is lost to follow-up after three recorded call attempts and the lost to follow-up is documented in Med-IT. Clients may decide to contact the provider and re-initiate her sessions, and can do so, if it is within four months of her rescreen date.

Contacting Clients – Missed Diagnostic Office Visit for Alert or Abnormal Values

When the results of the Integrated Office Visit indicate the need for a DOV referral and the client does not return for a DOV for further evaluation, the WISEWOMAN provider organization attempts to contact the client.

1. The WISEWOMAN provider organization sends a missed appointment notice to the client.
2. If there is no response from the client within a week of the date that the missed appointment card was mailed, the provider organization will make a follow-up telephone call. If there is still no response, the provider organization will send a program contact letter to the client.
3. The provider organization attempts to contact the client must include notification of the benefits of receiving, and the health consequences of refusing, follow-up.
4. The provider organization must assure documentation of three attempts to contact participants before designating the participant as "lost to follow-up."
5. After all attempts have been made to contact the client, she is to remain active in the data system because she might return later.

The provider organization will document activities in the WISEWOMAN Med-IT® data management system client's Recall Activity screen.

Section 11: Healthy Behavior Support Services

Healthy Behavior Support Service (HBSS) Overview

WISEWOMAN'S mission is to provide clients with the knowledge, skills and opportunities to improve their diet, physical activity and other life habits to reduce their risk of heart disease, stroke and diabetes. The provider organization must ensure that WISEWOMAN clients have access to healthy behavior support services after the initial or rescreening Integrated Office Visit has been completed.

Healthy Behavior Support Services Participation

Screening results, health risk assessments, readiness to change, client goals and preferences should be used to determine if a client is referred to a specific lifestyle program or health coaching.

Initial Healthy Behavior Support Service

The first Healthy Behavior Support Service encounter will happen at the IOV. This will ensure that the motivated client leaves with information on her risk factors, information on how to take small steps toward better health through goal setting, and information on how to access her HBSS option. The provider will use the Screening and Healthy Behavior Support guide [P- 00909] to facilitate the first intervention discussion.

Referral Readiness

- Once the client's level of motivation has been determined and her chronic disease risks have been considered, the WISEWOMAN provider organization will work with her to determine which HBSS option is appropriate. The WISEWOMAN provider organization should become familiar and comfortable with discussing the available options.
- To enroll in a HBSS, the client must:
 - Indicate a readiness to change.
 - Agree that the chosen HBSS is an appropriate option.
 - Read the HBSS referral and completion promise.
- Any medical hypertension support must be addressed before receiving any HBSS.

Documentation of Healthy Behavior Support Services

Healthy Behavior Support encounters will be documented in the WISEWOMAN Med- IT® data management system. Staff will designate "in progress" until the client finishes the required number of encounters. A follow-up screening visit should occur within four to six weeks after LSP/HC completion, or at least three months prior to the client's rescreening appointment. (See Section 13 Follow-up Screening–LSP/HC Complete)

Increasing Client Participation

The provider organization should use the following strategies to encourage and support completion of the intervention:

- Use motivational communication when presenting the HBSS referral and completion expectations during the initial counseling.
- Provide other supportive services to enrich the client's experience based on the provider's community resources, e.g., free limited membership to exercise facility, access to cooking demonstrations, gardening session, *WISEHEART* texting.

- Employ creative ways to engage clients, e.g., group events, video remote coaching.
- Refer clients to other community-based resources, e.g., walking trails, chronic disease management programs, community health forums to support their goals.
- Support environments that reinforce behavior change, e.g., walking groups, access to fresh fruits and vegetables.
- Provide resources such as transportation and childcare as needed.
- Provide healthy behavior enhancement tools, e.g., step counter, meal portion plate, jump rope and infusion water bottle.
- Encourage involvement of family members and friends for additional support.
- Use motivational interviewing, particularly when an individual is having difficulties maintaining behavior change.
- Establish a feedback loop mechanism with the medical provider to reinforce goals.
- Provide tips and tools for self-monitoring of progress.
- Offer additional materials/items to support maintenance of heart healthy behaviors, (e.g., cookbooks, healthy tips newsletters).

Take Off Pounds Sensibly (TOPS)

Program Focus and Overview

Take Off Pounds Sensibly (TOPS) is a national nonprofit organization that has been in the community since 1948. TOPS help its members manage weight problems through group support and education. The TOPS plan includes information about healthy eating, exercise, and behavior modification.

Intended Audience

WISEWOMAN clients who are interested in TOPS must:

1. Have a BMI ≥ 25 or ≥ 23 if Asian American Pacific Islander (AAPI).
2. Be able to establish a healthy and reasonable weight loss goal.
3. Read and sign the WISEWOMAN client consent form.
4. Read the Healthy Behavior Support Service participation agreement.
5. Have access to a viable phone.
6. Be able to pay the required weekly chapter meeting dues.

* If the client has abnormal blood pressure, she will start after she has received hypertension medical support.

Program Content/Materials

1. The WISEWOMAN program has entered into a partnership with TOPS to provide clients with a one-year membership. The membership allows the client to participate in weekly chapter meetings or online member support. There is no cost to switch between online and in-person membership or vice versa or to change chapters.
2. All members, whether attending meetings in-person or online (English only) receive the following benefits:
 - a. TOPS News member magazine (six issues bimonthly) English only
 - b. Six-week quick-start guidebook TOPS *My Day One* guide (English) or TOPS *Mi primer dia* (Spanish).
 - c. Online tools.
 - d. A food and exercise journal.
3. Some TOPS materials are free to members and include a variety of health education pamphlets. There are no TOPS-specific Spanish materials. Spanish education materials can be found by linking to Krames on the TOPS website online education library.

Key Activities—Weekly In-Person Chapter Meetings

1. Clients will discuss and agree upon a target weight goal with the screening provider. This target goal goes to the weight recorder at the chapter meeting.

2. Weekly one-hour chapter face-to-face meetings focus on healthy eating, regular physical activity and wellness information as well as rewards and recognition.
3. Each meeting starts with a private weigh-in, which is often followed by roll call and a chance for members to share challenges, successes or goals. Many chapters hand out awards each week or monthly. Meetings include an interactive informational presentation to support weight-loss efforts. The meeting usually closes with an inspirational activity. TOPS uses two different healthy eating plans: the Food Exchange System and MyPlate.
4. Once a member reaches their goal weight, they become KOPS (Keep Off Pounds Sensibly) members. TOPS have KOPS members who have kept their weight off for more than 20 years.

Key Activities Online Meetings (English only)

Online meetings are held by the TOPS Inc. chatroom and are facilitated by an online coordinator.

1. Live chatroom meetings are available twice a week, currently on Monday and Thursday evenings, and are subject to change based on member needs.
2. The facilitator presents the weekly topic or program.
3. Members discuss the current topic and share challenges and successes.
4. Occasionally, a featured guest speaker joins the group to share their expert views on fitness, nutrition etc.
5. The client can catch up with other online members between meetings in the private Facebook group.
6. Online services require the creation of an online account. The account is set up at no charge.

Online Chapter Meetings

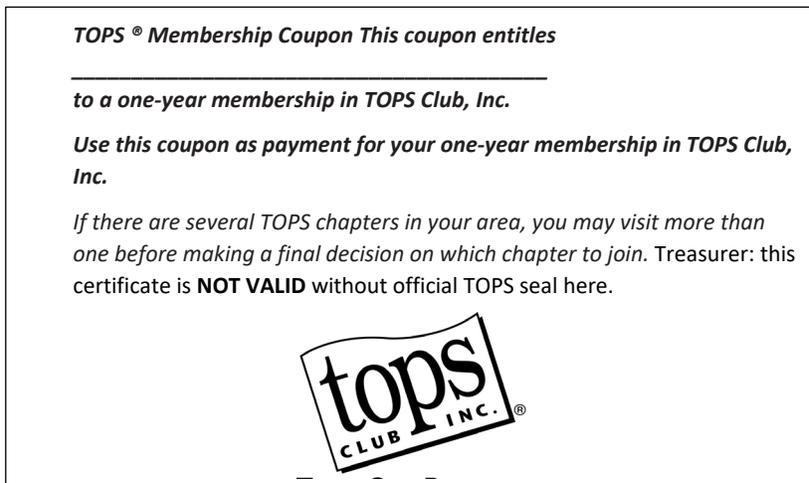

Mondays	Thursdays
9:00 p.m. Eastern	7:30 p.m. Eastern
8:00 p.m. Central	6:30 p.m. Central
7:00 p.m. Mountain	5:30 p.m. Mountain
6:00 p.m. Pacific	4:30 p.m. Pacific

*Meeting times are based on availability of online coordinator and preferences of online members and may change from time to time.

Referral, Enrollment and Engagement Process

1. Client selects TOPS following risk counseling and readiness assessment.
Clients who do not select an HBSS will be called back in approximately 30 days to determine if they are ready for a healthy behavior support intervention.
2. The screening provider documents the TOPS referral in the WISEWOMAN Med-IT® data system.
3. The provider supports the client in establishing a healthy and reasonable weight loss goal.
4. The provider helps the client to [select a chapter](#) that best fits her schedule and comfort level. Wisconsin has over 200 local chapters, including nearly 24 chapters in the Greater Milwaukee area. There is one Spanish-speaking chapter in Milwaukee. Please note that clients are encouraged to visit several chapters before making a final selection. TOPS allows initial visits at no charge.
5. A health coach then meets with the client to complete an initial healthy behavior support intervention. This initial intervention helps to support the client's ability to take steps toward better health through goal setting and action planning. The session will be at least 30 minutes long. Once the client has selected a chapter location, the provider organization program coordinator will send her a TOPS membership voucher to take to her next chapter meeting. The provider organization should contact the WISEWOMAN program coordinator and request the number of vouchers needed.

6. The client completes a TOPS membership application. The application and voucher are mailed to the TOPS corporate office by the chapter leader.

7. The provider organization program coordinator:
 - a. Retrieves the referral(s) at the end of each day and contacts client(s) to confirm specific information on the date, time and location of the TOPS Chapter that has been selected.
 - b. Conducts follow-up calls at various intervals (gets status of participation, problem solves any challenges to attending, provides general motivation/encouragement).

Bi-Directional Referral Plan

The provider organization will be required to establish a bi-directional referral agreement with the TOPS chapter where they refer clients. These agreements will include:

- Client information (name, contact information).
- Date of referral.
- Referral process/flow.
- Referral provider information (name, contact information).
- Type of outcomes, e.g., weight, support services (cooking demo, movement session), completion and/or withdrawal.
- Frequency of report data.
- Provider and staff agency roles and responsibilities.

Number of Sessions Required for Completion

- Clients who attend 12 weekly chapter meetings and/or online chat discussions during the first six months will be considered complete. Document meetings in the WISEWOMAN Med-IT® data management system.
- Clients may continue to participate in TOPS until their annual membership has expired.
- If the client stops attending Chapter meetings regularly, the TOPS Chapter leader (or another member) may call or email the client.
- TOPS will send a renewal notice six to eight weeks before a member is scheduled to renew and sends an "Oops" your membership is past due email.
- Membership renewal will not take place until the client returns for her annual rescreen and again selects the TOPS option.

Other Support Services

- Provider organizations will provide other supportive services to enrich the client's experience based on the provider's community resources, e.g., CORE El/Centro community chapter meetings for Spanish speakers will have access to cooking demonstrations, gardening sessions, and movement classes.
- Clients completing TOPS may be provided a \$20 gift card to support chapter meeting attendance and to help offset the required chapter meeting dues, which can range from \$1-\$3 per month.

- Clients will be offered a texting support service, “*WISEHEART*,” through our partnership with the Wisconsin Women’s Health Foundation (WWHF).

Diabetes Prevention Program (DPP)

Program Focus and Overview

The Diabetes Prevention Program (DPP) is for clients who are at high risk for developing type 2 diabetes. The program focuses on helping clients make and continue healthy lifestyle changes by eating healthier, increasing physical activity to 150 minutes per week, and losing a small amount of weight (5%–7% of body weight).

Based on research funded by the National Institutes of Health, the program has been shown to reduce the risk of developing type 2 diabetes by as much as 58%. The reduction was even greater at 71% among adults aged 60 years or older. Nearly half of the study participants were African American, Hispanic, American Indian, Asian, or Pacific Islander.

Intended Audience*

WISEWOMAN clients who are interested in DPP must:

1. Be overweight (Body Mass Index ≥ 25 ; ≥ 23 if AAPI) and
2. Not be pregnant and
3. Have no previous diagnosis of type 1 or type 2 diabetes and
4. Have either a blood test result in the prediabetes range within the past year:
 - Hemoglobin A1C: 5.7–6.4% or
 - Fasting plasma glucose: 100–125 mg/dL or
 - Two-hour plasma glucose (after a 75-gm glucose load): 140–199 mg/dL or
 - A previous clinical diagnosis of gestational diabetes during a previous pregnancy

OR

A [positive screening for prediabetes](#) on the Prediabetes Screening Test.

5. Read and sign the WISEWOMAN client consent form.
6. Read the Healthy Behavior Support Service participation agreement.
7. Have access to a viable phone.

* If the client has abnormal blood pressure, she will start after she has received hypertension medical support.

Program Content/Materials

The following materials are used in the program:

- Participant Notebook (Core) contains worksheets and handouts for participants to use in each of the 16 core sessions of the lifestyle intervention.
- Participant Notebook (post-Core) contains worksheets and handouts for participants to use in the post-core phase of the lifestyle intervention.
- Additional materials used by participants during the lifestyle intervention include food, activity and weight tracker logbooks, and a fat and calorie counter guide.

Key Activities

1. One-hour weekly sessions facilitated by a lifestyle coach focusing on eating smaller portions, reducing fat and discovering healthier food options to help prevent the onset of type 2 diabetes; increasing moderate physical activity and losing at least 7 percent of body weight.
2. Establishing defined weight loss and physical activity goals.
3. A private weigh-in and review of self-monitoring records.
4. Identification of barriers and action planning, in a group setting.
5. Tracking documentation of pounds lost, physical activity, and food consumption.
6. Each week has established learning objectives.
7. After completion of the core curriculum, a maintenance/post-core phase is offered to all participants. It consists of a minimum of six one-hour, group-based sessions in person,

occurring once a month for the remaining year of the lifestyle program. The post-core phase is less structured than the core phase, but the framework parallels core curriculum.

Referral, Enrollment and Engagement Process

1. Client selects DPP following risk counseling and readiness assessment.
 - a. Clients who do not select an HBSS will be called back in approximately 30 days to determine if they are ready for a healthy behavior support intervention.
 - b. The screening provider documents the DPP referral in the WISEWOMAN Med-T® data system.
2. The provider reviews program options with the client, using the [Wisconsin Healthy Aging website](#) as a resource.
3. A health coach then meets with the client to complete an initial healthy behavior support intervention. This initial intervention helps to support the client's ability to take steps toward better health through goal setting and action planning. The session will be at least 30 minutes in length.
4. The provider organization program coordinator:
 - a. Retrieves the referral(s) at the end of each day and contacts client(s) to confirm specific information on the date, time and location of the DPP.
 - b. Conducts follow-up calls at various intervals (gets status of participation, problem solves any challenges to attending, provides general motivation/encouragement).

Bi-Directional Referral Plan

The provider organization will be required to establish a bi-directional referral agreement with their identified DPP community providers. These agreements will include:

1. Client information (name, contact information).
2. Date of referral.
3. Referral process/flow.
4. Referral provider information (name, contact information).
5. Type of outcomes, e.g., weight, support services (cooking demo, movement sessions), completion and/or withdrawal.
6. Frequency of report data.
7. Provider and staff agency roles and responsibilities.

Number of Sessions Required for Completion

Clients who attend nine of the 16 Core sessions will be considered complete. The client should be encouraged to attend a minimum of three of the six maintenance/post-Core meetings within six months. Document sessions in the WISEWOMAN Med-IT® data management system.

Other Support Services

1. The provider organization will have allocated funding to include other supportive services to enrich the client's experience based on the provider's community resources.
2. The WISEWOMAN program will provide healthy behavior enhancement tools, e.g., step counters, meal portion plates, jump ropes, and infusion water bottles.
3. Clients will be offered a texting support service "WISEHEART" through our partnership with the Wisconsin Women's Health Foundation (WWHF).

University of Wisconsin Supplemental Nutrition Assistance Program - Education (SNAP-Ed)

Program Focus and Overview

[SNAP-Ed](#) is an evidence-based program that helps individuals lead healthier lives. SNAP-Ed teaches people using or eligible for the Supplemental Nutrition Assistance Program (SNAP) about good nutrition and how to make their food dollars stretch further. Participants also learn to be physically active.

Intended Audience

WISEWOMAN clients who are interested in SNAP-Ed must:

1. Have a BMI ≥ 25 or ≥ 23 if AAPI.
2. Have deficiencies in her diet composition and daily physical activity.
3. Read and sign the WISEWOMAN client consent form.
4. Read the Healthy Behavior Support Service participation agreement.
5. Have access to a viable phone.

* If the client has abnormal blood pressure, she will start after she has received hypertension medical support.

Program Content/Materials

1. Group sessions are provided in English and Spanish. The Nutrition Educator acts as a facilitator rather than an expert.
2. Paraprofessional nutrition educators guide participants on:
 - a. Healthy Nutrition:
 - i. How to make healthy food purchases.
 - ii. Planning and preparing healthy meals.
 - iii. How to store food safely to prevent waste.
 - iv. Planning and shopping for healthy meals/snacks that are within their budget.
 - v. Dietary composition based on the MyPlate for My Family curriculum.
 - b. Physical Activity:
 - i. Why being active is important.
 - ii. How much physical activity is enough?
 - iii. Ways to become more active.
3. Group sessions are participatory and support group interaction, cooperative sharing and a sense of belonging.
4. Interactive cooking demonstrations are provided.
5. Clients will receive learning enhancement tools to help them adopt the behavior presented in each lesson, including a water bottle, grocery shopping list, produce brush, measuring cup set, stretch band, and measuring spoon set. These are provided at no cost to the client.
6. A graduation ceremony is held at the final session and the client receives a completion certificate.

Key Activities

1. Four weekly one-hour sessions led by a UWM Extension health educator. SNAP-Ed is available in English and Spanish only.
2. Each session is 60 to 90 minutes long and provides opportunities for goal setting, skill building and feedback.
3. Each session includes a food preparation activity, hands-on learner-centered activities, and a physical activity segment.

Referral, Enrollment and Engagement Process

1. The client selects SNAP-Ed following risk counseling.
 - a. Clients who do not select an HBSS will be called back in approximately 30 days to determine if they are ready for a healthy behavior support intervention.
 - b. The screening provider documents the SNAP-Ed referral in the WISEWOMAN Med- IT® data system.
2. A health coach then meets with the client to complete an initial healthy behavior support intervention. This initial intervention helps to support the client's ability to take steps toward better health through goal setting and action planning. The session will be at least 30 minutes long.
3. The provider organization program coordinator:
 - a. Retrieves the referral(s) at the end of each day and contacts client(s) to confirm specific information on the date, time, and location of the next SNAP-Ed program cycle.

- b. Conducts follow-up calls at various intervals (gets status of participation, problem solves any challenges to attending, provides general motivation/encouragement).

Bi-Directional Referral Agreement and Plan

Each provider organization will establish an interagency agreement for SNAP-Ed programming annually with University of Wisconsin Cooperative Extension office. These agreements outline each organization's roles in the delivery of SNAP-Ed (number, time, location of SNAP-Ed series) and client enrollment eligibility. The bi-directional referral and reporting requirements will include:

1. Client information (name, contact information).
2. Date of referral.
3. Referral process/flow.
4. Referral provider information (name, contact information).
5. Completion, withdrawal and frequency of report data.
6. Provider and staff agency roles and responsibilities.

The WISEWOMAN provider organization will secure the meeting location with support and input from the Extension office.

Number of Sessions Required for Completion

Clients must complete all four weekly sessions. Document classes in the WISEWOMAN Med- IT® data management system.

Other Support Services

1. The provider organization will have allocated funding to include other supportive services to enrich the client's experience based on the provider's community resources, e.g., access to cooking demonstrations, gardening session, and exercise facility trial membership.
2. Clients will be offered a texting support service, "WISEHEART," through our partnership with the Wisconsin Women's Health Foundation (WWHF).

iVenga y Relájese! Stress Management

Program Focus and Overview

Although WISEWOMAN clients have access to healthy behavior support services that focus on health coaching, diabetes prevention, and weight reduction, no HBSS specifically addresses stress. Stress can negatively affect the human body, increasing risk for depression, anxiety, insomnia, cardiovascular, and gastrointestinal problems.

iVenga y Relájese! is a three-week, two-hours per week evidence-informed peer-centered pilot intervention. The intervention was created in partnership with Advocate Aurora Walker's Point Community Clinic and the University of Wisconsin School of Medicine Training in Urban Medicine and Public Health (TRIUMPH) Program.

iVenga y Relájese! teaches women stress reduction strategies (group meditation, deep breathing, mindful eating and movement exercises). Discussions, group sharing, and support are also a part of each session.

Intended Audience

Latina WISEWOMAN clients who are interested in iVenga y Relájese! must:

1. Express daily stressors are impacting their ability to make healthy lifestyle changes.
2. Read and sign the WISEWOMAN client consent form.
3. Read the Healthy Behavior Support Service participation agreement.
4. Have viable access to a phone.

Please note: if the client has abnormal blood pressure, she will start after she has received hypertension medical support.

Key Activities

1. Small Group Didactics: Participants will address these questions: What is stress? How does it affect you? What resources do you use to cope? Who do you turn to for support? They will also do the Life Change Index Stress Assessment.
2. Group Activities – Self Compassion and Supportive Hands.
3. Relaxation Techniques, Deep Breathing, Lebed Movement Therapy (DVD), Guided Meditation (CD), Aromatherapy, Adult Coloring, Movement and Mindfulness.
4. Goal setting and accessing community resources.
5. Group Sharing.
6. Completion ceremony.

Referral, Enrollment and Engagement Process

1. Client selects iVenga y Relájese! following risk counseling.
Clients who do not select an HBSS will be called back in approximately 30 days to determine if they are ready for a healthy behavior support intervention.
2. The screening provider documents the iVenga y Relájese! referral in the WISEWOMAN Med-IT® data system.
3. A health coach then meets with the client to complete an initial healthy behavior support intervention. This initial intervention helps to support the client's ability to take steps toward better health through goal setting and action planning. The session will be at least 30 minutes long.
4. The provider organization program coordinator:
 - a. Retrieves the referral(s) at the end of each day and contacts client(s) to confirm specific information on the date, time and location of the next iVenga y Relájese! program cycle.
 - b. Conducts follow-up calls at various intervals (get status of participation, problem solves any challenges to attending, provide general motivation/encouragement).

Bi-Directional Referral Plan

iVenga y Relájese! will be piloted in the Advocate Aurora Walker's Point Community Clinic. Inter-agency referral will be done through the program data system. A bi-directional referral agreement with the Advocate Aurora Walker's Point Community Clinic can be established between other Milwaukee providers. These agreements will include:

1. Client information (name, contact information).
2. Date of referral.
3. Referral process/flow.
4. Referral provider information (name, contact information).
5. Type of outcomes, e.g., client attendance, completion, and withdrawal.
6. Frequency of report data.
7. Provider and staff agency roles and responsibilities.

Number of Sessions required for Completion

iVenga y Relájese! clients who attend all three sessions will be considered complete. Document sessions in the WISEWOMAN Med-IT® data management system.

Please note that clients can choose to participate in another healthy behavior support option after completing iVenga y Relájese!.

Other Support Services

1. Provider organization will refer clients with more intense counseling needs to the Healing Center at Core El/Centro. Clients can also be seen by the clinic's behavioral health staff.
2. After completing iVenga y Relájese! clients can participate in the clinic's iVenga y Siga Creciendo! (Come and Keep Growing) program.
The iVenga y Signa Creciendo! (a non-WISEWOMAN intervention), is an intense 8-week, 2-hour program developed by the Advocate Aurora Walker's Point Clinic in response to iVenga y Relájese!. The intervention builds on the stress management skill-building

practices introduced in ¡Venga y Relájese! and adds an additional focus on mindfulness communication and feelings.

3. Participants enrolled in ¡Venga y Relájese! should be offered "WISEHEART" Española through our partnership with the Wisconsin Women's Health Foundation (WWHF).

YMCA Hypertension Control Blood Pressure Self-Monitoring (BPSM)

Focus and Overview of the Program

This four-month, evidence-based program is for adults who have high blood pressure and who are interested in self-monitoring. The self-monitoring program aims to help clients better manage their blood pressure. The program emphasizes that self-monitoring and tracking of one's blood pressure can play a significant role in reducing one's blood pressure and improving quality of life.

Program Goals

- Reduction in blood pressure.
- Better blood pressure management.
- Increased awareness of triggers that elevate blood pressure.
- Enhanced knowledge to develop healthier eating habits.

Intended Audience

WISEWOMAN clients who are interested in BPSM must:

1. Have a current/new blood pressure diagnosis and have a desire to practice self-monitoring.
2. Read and sign the WISEWOMAN client consent form.
3. Read the Healthy Behavior Support Service participation promise.
4. Have access to a viable phone.

Note: *clients who have a history of a recent cardiac event, atrial fibrillation, or other arrhythmias, or are at risk for lymphedema, are not eligible.*

Note: If the client has abnormal blood pressure, she will start after she has received hypertension medical support.

Key Activities

1. Clients receive support from trained Healthy Heart Ambassadors for the duration of the four-month program. During this time, participants will be encouraged to:
 - a. Measure and record their blood pressure at least two times per month.
 - b. Attend two personalized consultations per month.
 - c. Attend monthly Nutrition Education Seminars.
2. Clients will receive an individual YMCA membership while enrolled in the program.

Referral, Enrollment and Engagement Process

1. Client selects YMCA BPSM following risk counseling and readiness assessment.
 - a. Clients who do not select an HBSS will be called back in approximately 30 days to determine if they are ready for a healthy behavior support intervention.
 - b. The screening provider documents the YMCA BPSM referral in the WISEWOMAN Med-IT® data system.
2. A health coach then meets with the client to do an initial healthy behavior support intervention. This initial intervention helps to support the client's ability to take steps toward better health through goal setting and action planning. The session will be at least 30 minutes long.
3. The provider organization program coordinator:
 - a. Retrieves the referral(s) at the end of each day and sends a bi-directional referral to the YMCA BPSM staff.
 - b. Contacts the client(s) to confirm specific information on the date, time, and location of the next YMCA BPSM program cycle.

- c. Conducts follow-up calls at various intervals (gets status of participation, problem solves any challenges to attending, provides general motivation/encouragement).

Bi-Directional Referral Plan

The provider organization will be required to establish a bi-directional referral agreement with their YMCA BPSM partner. These agreements will include:

1. Client information (name, contact information).
2. Date of referral.
3. Referral process/flow.
4. Referral provider information (name, contact information).
5. Type of outcomes, e.g., client attendance by activity (one-one consultation, monthly nutrition education seminars), completion, and withdrawal.
6. Frequency of report data.
7. Provider and staff agency roles and responsibilities.

Number of Sessions Required for Completion

Clients must complete:

1. Blood pressure measurement and reporting (at least two times per month).
2. Weekly one-on-one consultations (clients must attend at least twice a month).
3. Two of the four monthly nutrition education seminars.
4. One required YMCA membership visit.

Document sessions in the WISEWOMAN Med-IT® data management system.

Other Support Services

1. The provider organization will have allocated funding to include other supportive services to enrich the client's experience based on the provider's community resources.
2. The WISEWOMAN program will provide healthy behavior enhancement tools including step counters, meal portion plates, jump ropes, and infusion water bottles.
3. Clients will be offered a texting support service, "WISEHEART," through our partnership with the Wisconsin Women's Health Foundation (WWHF).

Health Coaching (HC)

Health coaching is a WISEWOMAN healthy behavior support service option that will be provided by the provider organization. Health coaching will use motivational interviewing to support the client with developing and carrying out a personalized health plan that addresses her health behavior priority goal.

Major Characteristics of Health Coaching

1. Recognizing that the client is in charge of her own health.
2. Guiding the client to identify her motivators for change.
3. Providing suggestions, skill-building tools, activities, and resources.
4. Helping the client address change barriers and guiding the client to determine her solutions.
5. Serving as a collaborator and supporter of the client's change.
6. Building a climate of trust and support.

Who can perform Health Coaching?

Each provider organization will provide health coaching using a combination of the following team members: health educators, registered and/or advance practice nurses, and other trained health professionals. Community Health Workers (CHW) may serve as coaches under the supervision of a health professional previously mentioned.

Health coaches are identified by the provider organization management staff from the categories mentioned above. All coaches must be comfortable with providing one-on-one and/or group support coaching and have a caring, non-judgmental demeanor. Coaches must have knowledge of cardiovascular disease risks and healthy lifestyle behavior(s) that reduce

those risks. Once identified, WISEWOMAN program staff will provide program health coaching training. Coaches must also have initial training in Motivational Interviewing (MI) and annual refreshers. Coaches should access the self-study online MI training opportunities and/or health coaching tools disseminated by WISEWOMAN program staff.

Intended Audience

WISEWOMAN clients who are interested in health coaching must:

1. Have a SMART goal to address risk factor(s).
If the client's goal is to address abnormal blood pressure, her coaching session will start after she has received hypertension medical support.
2. Have access to a viable phone.
3. Have the ability to work one-on-one and/or in a group with a health coach.
4. Read and sign the WISEWOMAN client consent form.
5. Read the Healthy Behavior Support Service participation promise.

Referral, Enrollment and Engagement Process

1. Client selects health coaching after completing risk counseling and a readiness assessment. Clients who do not select an HBSS will be called back in approximately 30 days to determine if they are ready for a healthy behavior support intervention.
2. The screening provider documents the coaching referral in the WISEWOMAN Med-IT® data system.
3. The coach then meets with the client to complete an initial healthy behavior support intervention.
4. The session will be at least 30 minutes long. Subsequent coaching sessions can range from 15-60 minutes.
5. The initial session will include:
 - a. Creation of a healthy behavior change priority goal.
 - b. Development of an initial action plan to support that goal.
 - c. Discussion and delivery of supportive tools.
 - d. Agreement on subsequent coaching sessions.

Coaching Strategies

1. Coaching sessions will use motivational interviewing to support the client with developing and carrying out a personalized action plan. The plan will address her healthy behavior goals, which may include healthy eating, physical activity, and blood pressure management.
2. Coaching can be conducted face-to face, over the phone or in a group.
3. Coaching done by a CHW can occur in the clinic, the client's home (by agreement with the client), or an agreed-upon community location.
4. Small group coaching sessions can be provided with the consent of all of the clients when they have similar goals.
5. The WISEWOMAN program will provide health coaching education aids and learning enhancement tools that will support clients in making and maintaining healthy lifestyle choices or self-monitoring skills. Additional aids and tools may be available upon identification by the WISEWOMAN staff and/or recommendation by the provider organization.
6. The provider organization may implement other strategies to reach their clients, e.g., newsletters, group reunions and walking events.
7. Reto Dulce (Sweet Challenge), is a limited coaching and education intervention. The intervention was developed by the Advocate Aurora Walker's Pont Community Clinic, to address the high levels of A1c seen in their clinic population, Reto Dulce incorporates many of the strategies recommended by the Guide to Community Preventive Services for diabetes prevention and self-management e.g., weekly text message, use of CHW to provide education, coaching, social media support, medication adherence, diet and weight management, and other activities that help support client action plans.

Education Aids and Learning Enhancement Tools

The WISEWOMAN state office will provide health coaching education items. Currently the state office provides jump ropes, blood pressure monitors, blood pressure tracking cards, coloring books, meal portion plates, step pedometers, lunch bags, program grocery bags, and pill boxes. Additional aids and tools may be available once identified by the state office and/or recommended by the WISEWOMAN provider organization.

Bi-Directional Referral Plan

Each provider organization is contracted to provide health coaching as part of their WISEWOMAN services. Inter-organization referral will be done through the program's data management system.

Other support services offered by the provider organization must have a bi-directional referral agreement(s). These agreements will include:

1. Client information (name, contact information).
2. Date of referral.
3. Referral process/flow.
4. Referral provider information (name, contact information).
5. Type of outcomes, e.g., weight, support service (cooking demo, movement sessions), completion and/or withdrawal.
6. Frequency of report data.
7. Provider and staff agency roles and responsibilities.

Number of Sessions required for Completion

1. The number of coaching sessions and/or mode of delivery will be based on the client's needs. The coach will allow enough time between sessions to ensure that the client has time to practice skills and/or develop the positive behavior.
2. Clients must complete a minimum of three sessions. The maximum number of health coaching sessions a client can receive will be five within seven months. Document sessions in the WISEWOMAN Med-IT® data management system. Documentation must include the client's goal and progress notes to allow for assessment of the client's progress or concerns.
3. If clients are participating in Reto Dulce, they must complete a minimum of 10 social media or education contacts within the three months of the intervention (November-January).

Other Support Services

1. Each provider organization will provide other supportive services to enrich the client's experience based on the provider's community resources, e.g., access to cooking demonstrations, gardening sessions, exercise facility trial membership, transportation and childcare.
2. Clients will be offered a texting support service, "WISEHEART," through our partnership with the Wisconsin Women's Health Foundation (WWHF).

Health Coaching Blood Pressure Self-Monitoring (HCwSMBP)

Client self-monitoring of blood pressure is a valuable addition to the management of hypertension (the goal is usually less than 130/80 for most people) and is supported by the Million Hearts Initiative and the American Heart Association.

Health Coaching Blood Pressure Self-Monitoring Can Be Useful:

1. To empower the client to manage her blood pressure.
2. To monitor the client who cannot get her blood pressure under control with lifestyle change and medication.
3. For clients who are starting high blood pressure (HBP) treatment to determine its effectiveness.
4. To titrate medication(s).
5. To screen for white-coat hypertension.

Contraindication for Health Coaching Blood Pressure Self-Monitoring

1. If the client has atrial fibrillation or cardiac arrhythmias. (Home devices may not be able to give accurate measurements).
2. If the client has physical and/or mental disabilities.

Intended Audience

1. WISEWOMAN clients who are in any of the following blood pressure categories:
 - a. Elevated Blood Pressure measurement
 - b. Stage 1 Blood Pressure measurement
 - c. Stage 2 Blood Pressure measurement or higher
 - d. Uncontrolled Hypertension ($\geq 140/90$)
2. Have the manual dexterity to self-monitor and can do so appropriately.
3. Have access to a viable phone.
4. Have the ability to work one-on-one and/or in a group with a health coach.
5. Indicate change readiness and consent to the terms of the WISEWOMAN Client Home Blood Pressure Monitoring Agreement [F01398].

Note: If the client has abnormal pressure and/or alert, she will start after she received hypertension medical support.

Provider Readiness/Capacity for Health Coaching Blood Pressure Self-Monitoring Delivery

1. The provider organization responsibilities include the provision of HCwSMBP in their service contract.
2. The provider organization will provide HCwSMBP using a combination of the following team members: health coaches, registered nurses, advanced practice nurses, and other trained health professionals. Community Health Workers may serve as coaches under the supervision of one of the health professionals previously mentioned.
3. HCwSMBP coaches must have skills in motivational interviewing and be comfortable providing one-on-one and/or group support and have a caring non-judgmental demeanor. Coaches must have knowledge of cardiovascular disease risks, and healthy lifestyle behavior(s) that reduce those risks, and skills in taking and monitoring accurate blood pressure measures.
4. Staff who are doing HCwSMBP must attend a Target: BP SMPB implementation training including utilizing Target: BP SMBP resources and tools.

Referral, Enrollment and Engagement Process

1. Following risk counseling, information on benefits of HCwSMBP is discussed. If the client agrees she is referred.
The screening provider documents the HCwSMBP referral in the WISEWOMAN Med- IT® data system.
2. The health coach then meets with the client to complete the initial HCwSMBP session. The session will be 30 minutes long. Subsequent HCwSMBP coaching sessions can range from 20–60 minutes. The initial session will include:
 - a. Discussing the Blood Pressure Home Self-Monitoring agreement, having the client sign the agreement, and providing a copy of the agreement to the client.
 - b. Developing an initial action plan, to include the home self-monitoring start date. (The plan can also include healthy eating, physical activity, smoking cessation, and medication adherence).
 - c. Reviewing the importance of blood pressure measurement.

Service Delivery Procedure

Procedure	Team Members	Activities/Comments
1. Determine start date and frequency.	<ul style="list-style-type: none"> Clinical provider 	Based on clinical provider recommendations, measurements should be taken in the morning and afternoon until the next visit (2–4 weeks). First day measurements should not be considered when averaging a client’s reading. Home blood pressures are generally lower than office pressures (the mean is 8/6 mmHg lower).
2. Validate the monitor for accuracy by checking the monitor’s readings against the office equipment.	<ul style="list-style-type: none"> Health coach, nurse 	After initial validation, have client bring BP monitor in and check for accuracy during the face-face HCwSMBP coaching sessions.
3. Instruct on proper technique for taking blood pressure at home. Provide blood pressure monitor and other skill enhancement tools as needed.	<ul style="list-style-type: none"> Health coach 	Use Blood Pressure–Small Changes, Big Results section in the WISEWOMAN Program Screening and Healthy Behavior Support Healthy Lifestyle Guide (P00909). Show Target: BP SMBP training video.
4. Discuss blood pressure measurements reporting and documentation.	<ul style="list-style-type: none"> Health coach 	Have client take measurements weekly and thereafter, based on the client measurements. If abnormal, the client may have to report more frequently. Document HCwSMBP, in the LSP/HC section, including pertinent notes, e.g., BP goal, BP measurements, successes and challenges. Frequency normally is 2–4-week intervals.
5. Conduct HCwSMBP sessions	<ul style="list-style-type: none"> Health coach, Clinical provider, Pharmacist 	May need to titrate medication until mean out-of-office blood pressure is according to current HTN recommendations and the client’s goal. Assess highs or lows, compare morning and evening readings to those obtained 3–4 hours after medication is taken. Screen for white-coat hypertension. Refer to clinical provider for HTN management visit(s) based on client needs.
6. Follow-up on blood pressure readings that are too high or too low.	<ul style="list-style-type: none"> Nurse, Clinical provider, Health coach 	Ensure client knows to call 911 immediately if she has signs or symptoms of a heart attack or stroke. Ensure client knows who to call between office visits for clinical and/or health coaching sessions.

Number of Sessions Required for Completion

1. Clients must complete a minimum of 3 sessions. If after the 3 sessions the client continues to have problems with home measurement techniques, understanding, or control, the client may have an additional 2 sessions.
2. The number of HCwSMBP coaching sessions and/or mode of delivery will be based on the client’s needs. The coach will allow enough time between sessions to ensure that the client has time to practice skills and/or develop the positive behaviors.

3. Coaching should be conducted both face-to-face and over the phone. Face-to-Face encounters should be held until the client is skilled in the process and reporting log.
4. Small group HCwSMBP coaching sessions can be provided with the consent of all group members.

Education Aids and Learning Enhancement Tools

The WISEWOMAN state office will provide HCwSMBP education items. Currently the state office provides jump ropes, blood pressure monitors, blood pressure pocket tracking cards, coloring books, meal portion plates, step pedometers, lunch bags, program grocery bags, and pill boxes. Additional aids and tools may be available once identified by the state office and/or recommended by the WISEWOMAN provider organization.

Bi-Directional Referral Plan

The provider organization is required to conduct HCwSMBP as part of their WISEWOMAN contract agreement. Other support services offered by the provider organization must have a bi-directional referral agreement. The agreement will include:

1. Client information (name, contact information).
2. Date of referral.
3. Referral process/flow.
4. Referral provider information (name, contact information).
5. Type of outcomes (e.g., cooking demonstrations and movement sessions), completion, withdrawal and frequency of report data.
6. Provider and staff agency roles and responsibilities.

Other Support Services

1. Provider organization will have allocated funding to include other supportive services to enrich the client's experience based on the provider's community resources, e.g., access to cooking demonstrations, gardening sessions, exercise facility trial memberships, transportation, and childcare as needed.
2. Clients will be offered a texting support service, "*Badger Heart*," through our partnership with the Wisconsin Women's Health Foundation (WWHF). The 3-month intervention focuses on three health topics: stress management, blood pressure control and waist circumference. The text message service for stress management is available in Spanish. The service is free. However, participants may have to pay texting-related costs.

Section 12: WISEHEART Texting Program

Research studies suggest text messaging can be an effective method for supporting healthy behavior.

The Wisconsin Women's Health Foundation (WWHF) launched its statewide Badger Heart Text Campaign in 2016. The 3-month intervention was designed to help women reduce their risk factors for developing heart disease. Wisconsin WISEWOMAN has a partnership with the WWHF to offer the service to program clients who would like additional support to improve their heart health. Within our program these texting services will be identified as: WISEHEART and WISEHEART Española.

WISEHEART - Clients have the option of selecting one or all three health topics:

1. Stress Management
2. Blood Pressure Control
3. Waist Circumference

WISEHEART Española – Clients can get tips and relaxation techniques in Spanish to help them deal with their daily stress.

Intended Audience

Both WISEHEART and WISEHEART Española are considered support services. This means that in addition to the client receiving a healthy behavior support intervention (LSP/HC), she can also be encouraged to enroll in the text messaging support. The texting service is free for providers. However, clients may have to pay texting-related costs. Clients can stop the 3-month messaging at any time.

Referral, Enrollment and Engagement Process

1. Document referral in the WISEWOMAN Med-IT® data management system.
2. Participants just have to text "WISEHEART" to 97779 for English, or for Spanish, "WISEHEART Española" to 97779. Please note that only the Stress Management option is available in Spanish.
3. Once enrolled, participants will receive a text, on average, once a week.
4. Clients will be asked to respond to the following check-in messages:
 - a. Welcome to the Wisconsin Women's Health Foundation "BadgerHeart" Campaign! To get started, please reply with your FULL NAME.
 - b. How can we help improve your hearth health? (Client will reply with one or more of the following).
 - i. Control BP (blood pressure)
 - ii. Improve WC (waist circumference)
 - iii. Manage Stress (stress reduction)
 - c. Great (NAME)! Could you please give your age, gender, and zip code (ex., 52, female, 53713)? This information will help us provide the best service possible.
 - d. How are you doing, (NAME)? How can we offer you more support?

Thanks, (NAME), you have chosen "controlling blood pressure" as your focus. If you are comfortable, please share your reason for working towards a healthier heart.

Thanks for sharing, you have made an important first step. Now, let us get started!
We will send information and support three times a week for the next three months.

Messages Examples:

Want to look and feel better? Too much salt can cause bloating and isn't good for your heart. Try to stay under 2,300 mg of sodium per day (<1 tsp/day).

Need a new way to handle stress? How about journaling or yoga? Starting new habits to help with stress gives you better tools to cope in future situations.

Small, positive changes to diet and exercise can help reduce your waist circumference. Losing just ONE inch will help you see improvements in your heart health.

Enrollment and Completion

The client will be considered complete only if she continues receiving the text messages through the 3-month period.

WISEWOMAN client enrollment and completion data will be obtained from the Wisconsin Women's Health Foundation. Clients will be reported by age, gender, zip code, and topic(s) selected.

Section 13: Follow-up Screening – LSP/HC Complete

Purpose of Assessment

The follow-up screening allows the provider organization to offer additional support to the client while giving the agency an opportunity to collect mid-term outcome data. The provider must have the client’s previous screening data (health history assessment, healthy lifestyle assessment, screening results, healthy behavior support, etc.) available to compare and to appropriately confer with the client.

Timing for Assessment

This encounter is to be provided only after the client has completed her healthy behavior intervention. The visit should occur within four–six weeks after LSP/HC completion, or at least three months prior to the client’s re-screening appointment.

1. Health Coaching with Blood Pressure Self-Monitoring (3-5) sessions.
 - * Clients who complete three coaching encounters through the 30-day call back service **are** eligible to receive the follow-up screening services.
2. Lifestyle Programs
 - a. TOPS – twelve chapter meetings within a six-month period.
 - b. SNAP-Ed - all four classes.
 - c. Diabetes Prevention Program - nine of the sixteen classes.
 - d. ¡Venga y Relajese! - all three sessions.
 - e. YMCA BP Self-Monitoring
 - i. Blood pressure measurement and reporting (*at least two times per month)
 - ii. Weekly one-one consultations (* at least two times a month).
 - iii. Nutrition education seminars (*at least two of the four monthly seminars).
3. The Clinical Follow-up Assessment can occur:
 - a. When/if the client is returning to the clinic for another reason.
 - b. As a group wellness program, such as client recognition events, general risk reduction/health information presentations, etc. This format can increase the reach of the program and allow clients the opportunity to gain support from other women in the program.

During the follow-up screening, the following services must be provided: (See [\[F-01228\]](#) Follow-up Assessment LSP/HC Complete)

1. Cardiovascular history risk and lifestyle assessments.
2. Clinical screening measures (weight, first, second, and third blood pressure readings).
If the client had elevated cholesterol and/or glucose at the initial screening, the provider must administer a fasting cholesterol and glucose screening.
3. Clinical provider (NP, PA, MD) must review total follow-up assessment, and provide risk counseling and any necessary medical referrals.

Client Follow-up Assessment Screening - Referrals

Assessment	Follow-up
1. Elevated values (cholesterol, glucose).	<ul style="list-style-type: none"> ✓ Provide additional risk counseling. ✓ Linked to a provider for ongoing care.
2. Abnormal or Elevated BP with HTN management sessions remaining.	<ul style="list-style-type: none"> ✓ Provide client with remaining HTN sessions.
3. Abnormal or Elevated BP with no remaining HTN management visits.	<ul style="list-style-type: none"> ✓ Link to provider for ongoing care.

Document visits in the WISEWOMAN Med-IT® data management system.

Section 14: Healthy Behavior Support and Readiness Assessment

Purpose

The Healthy Behavior Support and Readiness Assessment contact is for clients who did not choose an HBSS option at the time of their IOV and gave permission for the provider to call back in 30 days to assess their readiness to enroll in an HBSS option. This encounter should be used as an opportunity to not only determine the client's readiness to select an HBSS option, but as a chance to conduct "health coaching" conversations, which will help foster program completion. This encounter is considered as a health coaching encounter if all the following criteria are met:

1. All items on the Health Behavior Encounter form/module are addressed and completed.
2. The discussion is done in the Spirit of MI and documentation supports the conversation addressing progress, barriers, and community resources.
3. The conversation should be 10–15 minutes.
If the client expresses that she does not want to choose an option or discuss her IOV SMART goal, the encounter cannot be billed as an HBSS session.

(See the [Healthy Behavior Encounter](#) form.)

At the end of the call you are encouraged to ask permission to contact her again to see how she is doing. If there is a second 30-day encounter and it meets the above criteria, the client will have completed the recommended three HC support contacts. Document the session in the WISEWOMAN Med- IT® data management system.

Remember, clients who complete three coaching encounters through the 30-day call back service are eligible to receive the follow-up screening service.

If the client selects an HBSS option and is referred to the service, the 30-day call back(s) should be discontinued.

Setting the Tone for the 30-day Call

"I understand that you are not ready to select a HBSS option today, however you have selected a priority area and established a SMART goal you would like to work on. We have lots of tools that can help you meet your goals."

"Thanks for giving me permission to call you back in 30 days to see how you are doing. Maybe then you might be ready to select one of the HBSS options. During the call I would also like to see how you are doing on the SMART goal you wrote today, and if you need any additional information and/or tools. We call this conversation health coaching ...would that be okay?"

Section 15: Rescreen Services

Rescreening Visit

1. All WISEWOMAN clients who participated in the previous granting period will be considered a “baseline screen” in year 1 of the 2018 funding period. In other words, there will be no clients designated as rescreen in the WISEWOMAN data system during this period.
2. Rescreen designation will resume if the clients return for services in subsequent years. It is recommended that rescreening office visits occur 12 months following the last screening office visit. However, rescreening may occur 12–18 months following the baseline screening, in order to be scheduled with the Well Woman Program office visit. The rescreening visit should be an Integrated Office Visit to the extent possible.
3. The provider organization will provide clients with a follow-up phone call or mailing prior to her annual rescreen visit.
4. The provider must have the client’s previous screening data (health history assessment, healthy lifestyle assessment, screening results, healthy behavior support, etc.) available to compare and to appropriately confer with the client.

Rescreening Integrated Office Visit Procedures

1. Rescreening provides the WISEWOMAN provider organization:
 - a. A chance to reassess the client’s heart disease, stroke, and diabetes risk factors, as well as to support progress toward the client’s lifestyle behavior changes over time.
 - b. The opportunity to provide feedback to the client regarding her progress toward reaching behavior goals, and reducing her heart disease, stroke, and diabetes risk factors.
2. The WISEWOMAN provider organization will contact clients up to one month prior to when their annual rescreen visit is scheduled to take place. Additional contacts from the provider organization to the client are executed as described previously in Contacting Clients Missed Integrated Office Appointments.
3. The annual rescreen visit should include all the services provided during the initial IOV, including healthy lifestyle and CVD history assessment, risk counseling, appropriate medical referrals as needed, healthy behavior support services, and bi-directional referrals as needed.

Document the visit in the WISEWOMAN Med-IT® data management system.

Section 16: Data Management

Confidentiality of Client Information

1. All information gathered through the process of providing services to WISEWOMAN clients shall be deemed confidential.
2. WISEWOMAN clients will be made aware of the collection of information concerning them at the time of enrollment. Such information may be shared with program evaluation staff and appropriate staff at the Department of Health Services and others as required for coordination of care, claims payment, and as required by the federal funding source.
3. The WISEWOMAN provider organization is subject to all federal and state laws regarding confidentiality and disclosure of medical or other health information. Client information shall not be discussed in public except in professional settings required for the delivery of services or performance of other functions officially assigned to the program.
4. All clients' data and medical records or computerized files shall be maintained securely. Data files must be stored in a confidential manner.
5. In all cases, it is the provider organization and screening provider that "hold" the confidential information, not an individual employed by the agencies. Each agency must have its own procedure governing access to case files to individuals within the agency. If a program is monitored from a public agency (federal, state, or county) and is reviewing a program, he/she must request to review a client's files. However, the laws governing confidentiality of those files also extends to the public agent and files cannot be released to a third party.

Client Medical Record Maintenance

1. The WISEWOMAN medical provider will incorporate documentation of WISEWOMAN services for each client. The WISEWOMAN record must include documentation of WISEWOMAN and Well Woman service delivery information.
2. The client medical record files/data must be maintained in accordance with accepted medical record maintenance standards.
 - a. Provider organizations using EMR systems must verify the data for accuracy and completeness prior to being entered in the WISEWOMAN data system. The provider does not have to print paper copies of the records as long as these records can be accessed to verify participant data.
 - b. Provider organizations not using systems must keep copies of all of the client's paper forms.
3. The WISEWOMAN provider organization will enter data regarding the client's healthy lifestyle, health history, screening, follow-up findings (when applicable), and healthy behavior support encounter(s) into the WISEWOMAN Med-IT® data system within three working days after the client is seen or as soon as possible after receiving information from the health care provider.

Data Collection and Management

Wisconsin will be using OxBow Data Management System, LLC (Med-IT®) as our data system provider. Med-IT® is a web-based data system to collect and manage WISEWOMAN client services. The database is updated and maintained by OxBow-Med-IT® to meet the Centers for Disease Control and Prevention WISEWOMAN reporting, documentation and evaluation requirements.

Provider Organization Responsibilities

Provider organizations will only have access to their client screening and healthy behavior support services data.

1. Enter accurate and complete data (demographic, CVD and lifestyle assessments, clinical measurements, blood work values, risk counseling, LSP) and HC referral information during

- the screening visits (baseline, follow-up, and rescreen). Providers will also enter the diagnostic and/or hypertension management screening visit when applicable.
2. Assure that all client information is kept confidential.
 3. The program provides program forms. Information gathered on the forms represents all data that must be entered in Med-IT®. If paper documentation is used, or if the provider uses an EMR system, the provider organization must enter the client screening and service encounters into the program data system within **three working days** after the client is seen or as soon as possible after receiving information from the health care provider.
 - a. The only program form that is sent to the state office is the [Monthly Reporting for Direct Services](#) form. This form should be sent via confidential mail or secured email or fax by the 10th day of the month to reflect the activities from the previous month to the state office.
 - b. Current forms can be found on the [Department of Health Services website](#).
 4. Conduct "real time" quality and error data entry checks.
 5. Review validation reports sent by the data manager. These validation reports capture any data errors and quality issues that should be reviewed and corrected by the provider organization in a timely fashion, before the WISEWOMAN Minimum Data Elements (MDE) are submitted to the Centers for Disease Control and Prevention (CDC) twice each fiscal year.
 6. Conduct program management activities using client data reports: WW Abnormal Assessment, LSP/HC and Clients By Provider.

State Office Responsibilities

1. Provide initial and refresher trainings and technical assistance on WI Med-IT® data entry and extraction.
2. Facilitate OxBow Med-IT® training as needed.
3. Monitor data and provide feedback on:
 - a. Reporting accuracy.
 - b. Quality of services based on National Clinical Care Guidelines and CDC program guidelines.
 - c. Program evaluation/outcomes.
4. Maintain the program data system in order to support:
 - a. MDE submissions.
 - b. Program evaluation and performance measures.
 - c. Provider feedback reports.
 - d. Data quality and data system efficiency.
 - e. User compliance and login authority.
5. Provide monthly validation reports.
6. Assure HIPPA compliance of the database. Maintain/update Med-IT® User Log, e.g., authorize users, deactivate users, or change user roles and responsibilities as needed.
7. Maintain WI Data Entry and Extraction Instruction Guide.
8. Implement OxBow Data Management Systems Med-IT® Release Notes as needed.

Accessing Med- IT®

1. Provider organizations do not need to install additional software beyond a web browser. Med-IT® supports the most recent versions of Internet Explorer. Provider organizations may also use Firefox or Chrome.
2. Email the data manager, [Ragini Sathasivam](#), with the following information to request training and to obtain a temporary user ID:
 - a. Provider Organization name.
 - b. Street address and zip code.
 - c. Staff name(s) (first and last), title/role, phone number and email address.

Med-IT® Training and Password Changes

1. All staff requesting new access to Med-IT® are required to attend a training.
2. The training will be tailored to the staff's role and responsibilities.
3. Once a training date has been scheduled, the program data manager will send a temporary login password and a copy of the OxBow Data Management Med-IT® Initial Login Guide. Staff are required to change their temporary password within 24 hours. The password change and login must be done before the training.
4. Login access should not be shared with unauthorized team members.
5. Staff are required to change their password every 12 months. The system will let the user know they have to reset their password when trying to log into Med-IT.

Terminating Access

When a provider organization and/or individual staff is no longer authorized to access the WISEWOMAN database, the provider program coordinator must email the program data manager within 10 business days of the termination. The email should contain the name of the staff, the provider organization's name and reason for the termination.

Data Reporting

The WISEWOMAN Program was authorized by Congress and is funded by tax dollars. It is paramount that we have a clear picture of the program's impact on the women we serve. This can only be done by accurate and complete documentation. Ensuring that all the required data are entered in the Med-IT® data system is the foundation for capturing reliable WISEWOMAN service activity. These data will be used for program evaluation and to assess the impact of WISEWOMAN in reaching underserved women with cardiovascular disease screening, patient-centered risk counseling, healthy behavior support intervention, and low or/no cost health care referrals.

Quality Assurance

The goal of quality assurance (QA) is to assure that appropriate services are provided to each client and that program funds are utilized as required by program protocols. QA activities ensure high-quality medical standards of care are provided to women receiving WISEWOMAN program services. Quality assurance audits will monitor each WISEWOMAN provider organization's compliance with program implementation training and professional development activities. Program training and professional development activities will be recorded on the [WISEWOMAN Provider Assurances and Training Checklist](#) form. These forms will be kept with the provider organizations. Annually, a copy of each form will be sent to the state office.

Section 17: WISEWOMAN Evaluation

Program Evaluation

WISEWOMAN evaluation will provide information to stakeholders to ensure accountability, improve the program at the state and CDC levels, and expand practice-based evidence through sharing successful strategies. CDC will also provide evaluation technical assistance to WISEWOMAN program staff to support Wisconsin's evaluation and performance measurement efforts.

Overview of the WISEWOMAN Evaluation Approach

Ongoing monitoring, evaluation, and learning will be critical elements of the WISEWOMAN Program. There will be three primary components for the WISEWOMAN evaluation approach:

1. CDC-led comprehensive evaluation.
2. Wisconsin program-led evaluations.
3. CDC program Performance Measures.

The WISEWOMAN program will use a stepwise approach to evaluate program activities. This will allow us to describe the health impact of the program by the end of the funding period.

The following three strategies will be evaluated across the program funding period:

1. Tracking and monitoring clinical measures shown to improve health care quality and identify clients with hypertension.
2. Implementing team-based care to reduce cardiovascular disease risk with a focus on hypertension control and management.
3. Linking community resources and clinical services that support bi-directional referrals, self-management and lifestyle change for women at risk for cardiovascular disease.

Minimum Data Elements (MDEs)

WISEWOMAN Minimum Data Elements (MDEs) are a set of standardized data variables developed by CDC. These data variables ensure that consistent and complete information is collected for each of the 24 WISEWOMAN cooperative agreement recipients. MDEs serve the purposes of describing, monitoring, and assessing individual and program progress. The MDE data are obtained from the client health history, healthy lifestyle assessment, screening, diagnostic, case management, and healthy behavior support contact data submitted by the WISEWOMAN provider organization. The state WISEWOMAN program collects and submits MDE data to CDC in June and December.

Performance Measures

Performance measures support the ongoing monitoring and reporting of program accomplishments at the state and CDC levels. Wisconsin is required to establish baseline values and annual target values and to report to CDC on each of the required measures.

Short-Term Outcomes	Increased reporting, monitoring, and tracking of clinical data for improved identification, management, and treatment of women with high blood pressure.
	1. # and % of WISEWOMAN participants whose WISEWOMAN provider has a protocol for identifying clients with undiagnosed hypertension.
	Increased use of and adherence to evidence-based guidelines and policies related to team-based care.
	2. # and % of WISEWOMAN participants whose WISEWOMAN provider has policies or systems to implement a multi-disciplinary team approach to blood pressure control.
Short-Term Outcomes	Increased use of data systems to identify and refer at-risk women to appropriate healthy behavior support services.
	3. # and % of at-risk women in WISEWOMAN referred to an appropriate healthy behavior support service.
	Increased data sharing and utilization (e.g., through a bi-directional feedback mechanism)
Intermediate Outcomes	4. # and % of WISEWOMAN providers with an implemented community referral system (tracking bi-directional referrals) for healthy behavior support services for people with high risk for CVD.
	Increased engagement in self-management among women at-risk for and with CVD
	<i>No performance measure for this outcome.</i>
	Increased participation in HBSS resulting in improved and maintained healthy behaviors and lifestyle changes.
	5. # and % of women in WISEWOMAN referred to a healthy behavior support service who attend at least one session.
	Improved and maintained healthy behaviors and lifestyle changes
	<i>No performance measure for this outcome.</i>
Long-Term Outcomes	Improved blood pressure control
	6. # and % of women in WISEWOMAN with known high blood pressure who have achieved or are currently maintaining blood pressure control.
	Improved detection, prevention, and control of CVD.
	Surveillance measure reported by CDC.

Section 18: Program Materials

All the documents listed can be accessed at this [webpage](#).

Wisconsin encounter forms were developed to capture the WISEWOMAN Minimum Data Elements for DP18-1816. Only forms noted should be submitted to the state office monthly.

WISEWOMAN Forms and Publications–Integrated Office Visit

Number and Title	Description
Client Consent [F-01218] & [F-01218S]	Used to provide client information on the services provided including screening, follow-up screening, rescreening, medical follow-up (if required), possible risks, and the potential benefits of their involvement in the program, protection of identifiable information, and use of information for monitoring and evaluation.
Health History Assessment [F-01219] & [F-01219S]	Used to provide data (CVD history, medication prescribed and adherence, blood pressure self-monitoring practices) to support risk counseling and health coaching process, and establish baseline indicators to assess health change at follow-up screening and rescreening visits.
Healthy Lifestyle Assessment [F-01220] & [F-01220S]	Used to provide data (diet composition, alcohol consumption, physical activity level, use of tobacco products, depression) to support risk counseling and health coaching process, establish baseline indicators to assess health change at follow-up screening and rescreening visits.
Screening Activity Report [F-01221]	Used to capture medical and lifestyle risk factors, clinical screening measurements, lab results, risk counseling, and clinical and community follow-up referrals.
Healthy Behavior Encounter [F-01225]	Used to capture first and subsequent health coaching encounter activities (number of sessions, completion status, tools provided and community linkages, e.g., tobacco cessation, healthy eating, physical activity). Also used for BP recordings for BP Self-Monitoring health coaching.
IOV Assessment Packet [F-01219-pckt] & [F-01219-pckt] (Spanish)	Integrated Office visit forms (includes: Health History Assessment, Healthy Lifestyle Assessment, Screening Activity, Healthy Behavior Encounter).
Program Screening and Healthy Behavior Support Guide [P-00909] & [P-00909S]	Take-home education and support guide. Used to support risk counseling and health coaching. Guide provides screening results, information on healthy behavior support services, health coaching action planning, information on healthy eating, physical activity, and abnormal blood pressure. The guide also provides a sampling of free and/or no cost community resources.
