

Juniper Software Security Features

Juniper uses a **Microsoft Azure** platform, a set of cloud services that allow us to offer a secure, expandable network. Security is integrated into every aspect of Azure, protecting applications and data and supporting compliance efforts. These are the key security features offered by Juniper.

Access Control

- Access Control Policy
- Role-based access control where applicable
- Principle of least privilege
- Remote Access policy
- Network Access Controls
- Automated account locking and intrusion detection
- Physical Access Controls

Third Party Assurance

- Third Party Service Provider Management policy
- Vendor Security Risk Assessments completed for new vendors that handle sensitive information
- NDA, MSA, standard for new vendors that handle sensitive information
