Referral management

Receive referrals directly from your partner provider's EMR via secure email or fax. Your contact teams stay organized as they reach out to new participants. Logged and scheduled outreach touchpoints help route the new referrals to program services.

Outreach tracking

Track ROI and KPIs on referring partners like physicians, companies, and community-based organizations. Sort and filter for your top referrers to see where your outreach is working. In addition, your corporate partners can connect with unique logins while physicians refer through integration with EMR's and private portals.

Program data

Easily collect data for your health programs - choose a program from Welld's library or design your own. Track enrollments through program data collection and view business and health outcomes across all programs at all locations. User-friendly screens help make sure data is collected correctly.

Claims submission

Whether you get reimbursed through claims-based or direct payer contracts, Welld makes sure each payer gets patient and program data they need to be able to process your claims or invoices.

Health outcomes

Maintain a detailed stat history for each member so you can monitor their progress and refine their plan as needed. Get aggregate outcomes data at the program and location level to evaluate and prove the impact your organization has on community health.
