

NACDD Pulse Survey of Chronic Disease Directors

The Pulse Survey of Chronic Disease Directors for the month of July was focused on learning about the current work arrangements of Chronic Disease Unit staff. The survey was sent out to all Chronic Disease Directors, and a total of 19 responses were recorded.

■ Hybrid ■ Combination ■ Other ■ 100% in office

84% of Chronic Disease Unit staff have hybrid work arrangements

- Hybrid work arrangements were described as “staff doing a mix of in the office work and remote/telework”
- 6% of Chronic Disease Directors report “Combination” work arrangements – wherein some staff are 100% in office, other staff are 100% remote/telework
- 5% of Chronic Disease Directors report that staff are 100% in office
- 5% of Chronic Disease Directors report that staff have “other” work arrangements – wherein staff are largely remote, but a few are hybrid or 100% in person

On average, if staff have hybrid work arrangements, a majority spend an average of 1 day in office

44% of Chronic Disease Directors who reported “Hybrid” work arrangements note that staff spend an average of 1 day working in office. 31% of Chronic Disease Directors report an average of 2 days working in the office, while 25% of chronic disease directors report an average of 3 days working in the office.

47% of respondents report that the current work arrangement policy is permanent

If “Other” was chosen, some respondents report that:

- The policy is currently permanent but may change in the future (n=3)
- Current work arrangements are a pilot program that may be revised in the future (n = 2)
- They have not had official guidance as to future work arrangements (n=1), or that they have only had verbal confirmation of current work conditions (n=1)
