Welcome

Published 3/15/2022

Hello!

Welcome to the NYS Department of Health Learning Collaborative for Improving Cancer Screening in Health Systems.

On this site, you'll find resources to guide the implementation of cancer screening interventions such as journal articles, toolkits, guidebooks, sample material, and more.

We hope you find this site useful in supporting your efforts to increase cancer screening in your communities.

View site navigation instructions & tips

Working Together

Description

- The clinic intranet site is a one stop shop for partner clinics to visit to find information on project deliverables and reporting tools, as well as guidance and resources for implementing various interventions.
- Clinics can search for information by intervention and can also connect with other partner clinics either through the partner collaboration database or project discussion board.
- Clinics can also find recordings and slides for project learning collaborative sessions.
- The site is currently available only to partner clinics.

Learning Collaborative 5.18.22

Part 1: One-to-One Education Overview

gcc02.safeinlinks.protection.outlook.com

Passcode: BgXip4*R

This video serves a prerequisite for the live learning collaborative session held at noon on Wednesday 5/18/22.

After viewing this seventeen (17) minute recording, you will be able to:

- Describe the evidence supporting one-to-one education
- Describe key elements of effective one-to-one education

Part 2: Developing and Delivering Your Screening Promotion Message

meetmy.webex.com

Please view this recording of the live learning collaborative session held at noon on Wednesday 5/18/22.

At the end of this recording, you will be able to:

- Describe best practices for developing - key messages
- Describe best practices for delivering key messages
- Identify components of strong key messages

Screening Guidelines & Options

Published 3/14/2022

Toolkits & Guides

Do

- Do make a recommendation! Be clear that screening is important. Ask patients about their needs and preferences. The best test is the one that gets done.
- Do use the American Cancer Society or the USPSTF recommendations for colorectal cancer screening in average-risk adults, starting no later than age 50.*
- Do assess your patient's family history, medical history, and age.
- Do be persistent with reminders.
- Do develop standard office operating procedures and policies for colorectal screening and patient navigation.

Don't

- Do not use digital rectal exams (DREs) for colorectal cancer screening. In 1 large study, DREs missed 19 of 21 cancers.
- Do not report a positive stool test. Any abnormal finding should be followed up with a colonoscopy.
- Do not use stool tests on those with a higher risk. A colonoscopy must be performed.
- Do not minimize or ignore symptoms in patients younger than screening age. Evaluate and refer symptomatic patients to colonoscopy as needed, regardless of age.
- Do not expect to use non-clinical staff to help evaluate and refer symptomatic patients to colonoscopy as needed, and schedule follow-up appointments.
- Do not forget to coordinate care across the continuum.
